DE-DEMOCRATIZATION OF FIRMS:
A CASE STUDY OF PUBLICLY-LISTED PRIVATE EQUITY FIRMS

Sung Eun (Summer) Kim*

This paper develops a definitional and conceptual framework to assess the extent to which firms are democratically organized and applies the framework to thirty-nine publicly-listed private equity firms (“PPE”). The proposed definitional framework merges the criteria used by influential observers of political democracies together with the metaphor of “corporate democracy” that has been used by state legislators, federal regulators, the judiciary, and legal scholarship that have shaped U.S. corporate governance. Under the proposed definitional framework, democratic corporate governance refers to a regime that invites broad participation by shareholders, treats shareholders equally, protects shareholders from misconduct, and facilitates mutually binding consultation. By the same token, de-democratization of firms refers to a trend towards a regime that is less inclusive, less equal, less protective, and unilateral.

This case study focuses on mechanisms that are chosen by PPEs to facilitate shareholders’ participation in governance and to hold managers accountable to shareholders. PPEs are an appropriate subject for this case study because they are firms that have adjusted their once highly private and sophisticated governance structures to accommodate public investors. The organizational and contractual features that are chosen by these firms reveal the balance between shareholder and managerial power within these newly public institutions. This review finds evidence of de-democratization across all four dimensions (inclusion, equality, protection, and mutuality) of the proposed definition of corporate democracy. This account of the de-democratization within one segment of firms yields new insights about the relationship between firms and government. This Article takes the first step toward categorizing these various relationships between democratic principles in the corporate and political contexts and suggests tailored policy responses to the trend of de-democratization among firms.

Bryce Farrington, Susan Libicki, Grace Park, Kate Wetz, and Tavo Velarde provided extraordinary research assistance. Funding support from the Program in Corporate Welfare Studies at UC Irvine is also gratefully acknowledged.
The metaphor of “corporate democracy” has been widely used in the rules, regulations, decisions, and discourse that shape U.S. corporate governance. The concept refers generally to the similarities in the civic and corporate...
rate contexts, wherein citizens and shareholders, respectively, elect a governing body vested with control to make decisions on their behalf. Democratic governance emerged in both the political and corporate contexts to address the collective action problems that commonly arise among individuals organized as large groups. While there are noticeable parallels in the two contexts, there is evidence to suggest a growing divergence. Yet, the use of the “corporate democracy” construct persists and is even expanding.

Despite the widespread use of the “corporate democracy” metaphor in the regulation of business organizations, there is some confusion about what it means for corporate structures to be more or less democratic. For example, in the landmark Citizens United case, the Supreme Court lifted a ban on corporations’ independent expenditures on election speech, relying on the procedures of corporate democracy to protect the interests of any adversely affected parties. . .[and] may not be permitted to stand.”). See also infra note 46 and accompanying text.

3 MANCOUR OLSON, JR., THE LOGIC OF COLLECTIVE ACTION: PUBLIC GOODS AND THE THEORY OF GROUPS (1965) (describing organizational dynamics that impede efforts by large groups to pursue common interests); JONATHAN MACEY, CORPORATE GOVERNANCE: PROMISES KEPT, PROMISES BROKEN 8 (2008) (“Shareholders rely on the institutions of corporate governance to solve the problems inherent in the separation of share ownership and management of large public corporations.”).

4 A number of important and useful corporate governance indices have been developed by scholars and firms, but these existing metrics focus on the financial significance of governance (i.e., these metrics are used to empirically test the correlation between governance and firm performance). The distinguishing feature of the definitional framework developed here is that it draws from the characteristics of a “corporate democracy” to which legislatures, regulators, the judiciary, and legal scholars have attached legal significance. For a sample of existing metrics of corporate governance, see, e.g., Paul Gompers et al., Corporate Governance and Equity Prices, 118 Q. J. ECON. 107 (2003) (constructing the Governance Index, or G-Index, that is a composite of 24 equally weighted governance rules that measure the balance of power between managers and shareholders); Rafael La Porta et al., Legal Determinants of External Finance, LII No. 3 J. FIN. 1131, 1134, 1136 (1997) (constructing an antidirector rights index which focuses on five elements of minority shareholders’ rights: (i) ability to vote by mail, (ii) ability to retain control of shares during shareholders’ meeting, (iii) possibility of cumulative voting for directors, (iv) ease of calling an extraordinary shareholder meeting, and (v) availability of mechanisms for allowing oppressed minority shareholders to make legal claims against the directors); Lucian Bebchuk et al., What Matters in Corporate Governance?, 22 REV. FIN. STUD. 783 (2009) (constructing the Entrenchment Index, or E-Index, that is a composite of six corporate governance provisions: (i) staggered boards, (ii) limits to shareholder bylaw amendments, (iii) supermajority requirements for mergers, (iv) supermajority requirements for charter amendments, (v) poison pills, and (vi) golden parachutes); ISS ESG RATINGS, http://www.issgovernance.com/solutions/qualityscore/ (last visited Feb. 3, 2019) (using 225 unique data points to construct a corporate governance rating); GMI RATINGS, http://www.whartonwrds.com/datasets/gmi-ratings (last visited Feb. 3, 2019) (constructing the QualityScore, a governance risk assessment metric which combines the three pillars of environmental, social, and governance).
impacted shareholders. This presumption that the democratic procedures of corporate governance could appease dissatisfied shareholders was not one on which the justices could agree.

To address the confusion surrounding the relationship between democratic procedures and corporate governance, this Article first develops a definitional and conceptual framework that can be used to measure and compare the extent to which firms are democratically organized. This definition merges the criteria used by observers of political democracies together with the use of the term “corporate democracy” in the facilitation and regulation of business organizations. This Article proposes a definition of corporate democracy that encapsulates a regime that invites broad participation by shareholders, treats shareholders equally, protects shareholders from misconduct, and facilitates mutually binding consultation. By the same token, the de-democratization of firms refers to a migration to a regime that is less inclusive, less equal, less protective, and less mutually (and more unilaterally) binding.

This Article builds on the author’s earlier work on publicly-listed private equity firms (“PPE”) to examine how the governance and organization of this segment of firms fit with the proposed definitional framework of corporate democracy. PPEs have been lauded by some as a step toward democratizing capital markets by making investment opportunities once ex-
clusively available to high-net-worth and institutional investors more widely accessible. This case study reports on data from an extensive review of the charters and bylaws of thirty-nine PPEs. This Article focuses on mechanisms that are used to facilitate shareholders’ participation in governance and to hold managers accountable to shareholders and evaluates them on the dimensions of inclusion, equality, protection, and mutuality. The case study provides evidence of de-democratization across all four dimensions (inclusion, equality, protection, and mutuality) of the proposed definition of corporate democracy.

In addition to the case study of PPEs, recent market, legal, and regulatory developments provide evidence of a broader trend of de-democratization across all firms, particularly on the dimensions of inclusion and equality. While more than half of Americans say they currently have money in the stock market, this is the lowest ownership rate in Gallup’s nineteen-year trend. A further breakdown of the concentration of the shareholder base shows that the modal shareholder is “old and white,” as well as “a member of the elite one percent.” The top 10% owns 81% of shares, while the bottom 80% owns 9% of shares.

Another example of de-democratization in firms generally is the growing popularity of dual-class stock offerings, where different classes of stock carry unequal voting rights, usually to give insiders disproportionately larger voting rights. Increases in hedge fund activism, voting by proxy, fiduciaries voting clients’ shares, hedging, and borrowed shares, may result in pivotal voters having interests that are apathetic or even adverse to the long-term interests of all shareholders.

The prevalence of less democratic structures within a segment of firms, taken together with general trends toward de-democratization in the broader markets, suggests that it would be misleading to assume corporate governance to be aligned with democratic principles. It should be noted that there are perfectly good reasons for this non-alignment. The goal of the Article is not to suggest that firms should be democratically organized, but rather to

14 For a survey of the empirical literature on disproportionate ownership structures, see Renee Adams & Daniel Ferreira, *One Share-One Vote: The Empirical Evidence*, 12 REV. OF FIN. 51, 53 (2008) (reporting that the evidence on the effect of disproportional ownership on social welfare, shareholder value, and capital allocation is difficult to address empirically).
suggest a metric that can be used to identify the extent to which they are more or less democratically organized.

The effort to track how closely or how far corporate governance tracks or deviates from democratic governance provides an opportunity to clarify our presumptions and preferences regarding the relationship between firms and government, as well as why and how democratic principles matter, if at all, to corporate governance in the first place. On the one end, the corporate democracy metaphor has at times been used to determine whether firms can and should perform public functions. The basic idea driving this substitutionary account of firms and governments is that when firms adopt governance structures that are familiar to government (i.e., that are democratic), and can achieve the same goals as government (but with greater expertise and efficiency), firms may be relied upon to do some of the work of government. Under this account, the de-democratization phenomenon suggests that some firms may not be well suited to perform public functions, and it prompts a rethinking and refinement of the standards that are used to determine the suitability of private firms as substitutes for public institutions.

On the other end, the corporate democracy metaphor has also been used to highlight the complementarities between political and corporate democracies. The basic idea driving this complementary account of firms and government is that democratically governed firms contribute to a more robust and thriving democracy, and that, in turn, democratic institutions create a more robust and thriving market. It is perhaps under this account that the evidence of de-democratization is a cause for the greatest concern, as the move away from corporate democracy may be a consequence of and a precursor to further erosions of political democracy (where democratic ideals matter not just as a means but also as an ends).

Situations where the corporate democracy concept is used as one among many possible models for corporate governance are also useful to consider. The basic idea driving this modeling account of firms and government is that firms and governments are susceptible to similar challenges, and thus, that firms can learn from governments and vice versa. Under this account, the de-democratization of firms suggests that now may be an opportune time to consider other alternatives against which to measure

21 These might include collective action problems arising in large groups and the agency problems common to representative forms of governance.
and model corporate governance, such as meritocracy, stewardship, or guardianship, among others.

The rest of this Article will proceed as follows: Part I begins with a brief overview of corporate governance and democratic governance, and their intersection. A precise definition of these two terms helps us understand the various dimensions of corporate democracy—defined here as a regime that is inclusive, equal, protective, and mutually binding. Part II examines the governance structure of publicly-listed private equity firms and funds and measures the extent of their ‘democratization’ using the definitional framework developed in Part I. More detailed information about these firms are provided in the Appendices. Part III examines how recent legal and regulatory developments have contributed to, and also may be a signal of, further de-democratization across a broader spectrum of firms. Part IV outlines the implications of this de-democratization trend by explicit reference to the specific goals that the corporate democracy metaphor intends to serve. This Article concludes by offering a preview of the future of corporate democracy in light of recent technological advances.

I. DEFINING AND CONCEPTUALIZING CORPORATE DEMOCRACY

A. Political Origins and Legal Adaptations of the Corporate Democracy Metaphor

The concepts of “corporate democracy” and “shareholder democracy” have been used to describe the similarity between corporate governance and representative democratic governance in the civic and political contexts, wherein citizens and shareholders have the power to elect a governing body vested with control to make decisions on their behalf.22 In both contexts, representative democratic governance developed as a matter of necessity to address the coordination and collective action problems that inevitably arise in large groups. And in both contexts, representative democratic governance created its own set of costs, such as the threat of minority oppression and agency problems. Achieving a balance between the promises and perils of representative governance is a shared goal of political scientists and corporate law scholars. And in recognition of these commonalities, the term “corporate democracy” has been widely used in the regulations and discourse that have shaped U.S. corporate governance.

But what exactly does the term “corporate democracy” mean? To answer this question, we must begin with the basic yet complex definitional

22 Robert A.G. Monks & Nell Minow, Corporate Governance (2nd ed. 2001) (viewing shareholders as voters, boards of directors as elected representatives, proxy solicitations as election campaigns, and corporate charters and bylaws as the constitution).
question of what a democracy is. In his survey and synthesis of commonly used definitions of democracy, Charles Tilly categorizes the definition of democracy into four types—constitutional, substantive, procedural, and process-oriented. The constitutional approach to defining democracy emphasizes the laws concerning political activity enacted by each regime. The substantive approach emphasizes the conditions that are promoted by each regime. The procedural approach tends to single out a narrow range of procedures that are then used to determine whether a regime is democratic. Lastly, the process-oriented approach identifies the set of processes that must be sustained in order for a regime to qualify as democratic.

Tilly’s own definition of a democratic regime is one where “political relations between the state and its citizens feature broad, equal, protected and mutually binding consultation” (a process-oriented approach). Breadth refers to a large segment of the population enjoying extensive rights; equality refers to different categories of citizens enjoying equal rights; protection refers to protection from the state’s arbitrary action; and mutually binding consultation refers to whether decisions are binding to all parties.

Another example of the process-oriented approach is Robert Dahl’s definition, which refers to a democracy as a regime that meets the following five criteria: effective participation, voting equality, enlightened understanding, control of the agenda, and inclusion. Effective participation refers to members having equal and effective opportunities to make their views known to other members; voting equality refers to every member having an equal and effective opportunity to vote and each vote having equal weight; enlightened understanding refers to each member having equal and effective opportunity to learn about alternatives; control of the agenda refers to members having the opportunity to decide the matters placed on the meeting agenda; and inclusion refers to the principle that all adult permanent residents have full rights as citizens.

Dahl’s other writings on democracy offer a definition that is closer to a substantive approach, by identifying the six political institutions required by......
large-scale democracies. The first requirement is representative govern-
ment, where control over policy decisions are vested in officials who are
elected by citizens; the second is free, fair, and frequent elections; the third
is freedom of expression; the fourth is access to alternative sources of infor-
mation; the fifth is associational autonomy; and the sixth is inclusive
citizenship.

A number of legal scholars offer what under Tilly’s typology would be
considered a constitutional approach by identifying the institutional and
practical predicates of a democracy. Aziz Huq and Tom Ginsburg identify
three requirements of a democracy—a democratic electoral system, free
speech and association rights, and the rule of law. And by a democratic
electoral system, they mean a periodic, fair, free election where the losing
side cedes power. This definition presumes that elections have winners and
losers—i.e., that there is a contest, a point we will return to later.

Procedural approaches to defining democracy identify a particular fea-
ture that must (affirmative) or must not (negative) be present in order for the
regime to qualify as democratic. One example of an affirmative view is
Craig Borowiak’s account, which views accountability as the central princi-
ple of a democracy. Borowiak defines democratic accountability as “the
principle that the governed should have opportunities to sanction and de-
mand answers from the powers that govern them.” As one example of the
negative view, Michael Klarman points to entrenchment as the antithesis of
democratic principles. Entrenchment in the political context refers to the
“ways that incumbents insulate themselves and their favored policies from
the normal processes of democratic change” and is a concept that has re-
ceived much attention in the corporate context too, as discussed below.

The foregoing definitions of democracy focus on who participates (the
more who participate on a mutual and equal basis, the more democratic the
regime) and how they participate (the more equal and protected their partici-
$pation, the more democratic the regime). The remainder of this section fo-

cuses on how the foregoing conceptualizations of democracy carry over to the corporate context.

In the corporate context too, voting—and the questions of who gets to vote and how their vote is to be exercised and counted—has been the centerpiece of discussions about corporate democracy. And as in the political context, legal scholars have been preoccupied by the dangers of entrenchment (by managers, in the corporate context). Lucian Bebchuk, Alma Cohen and Allen Ferrell’s widely cited paper develops an index to measure the extent to which a board is entrenched. Three of the six provisions that make up the index relate to voting (voting requirements for bylaw amendments, charter amendments, and mergers).

There is a long line of cases in Delaware, starting with Schnell v. Chris-Craft Industries, Inc., that stand for the proposition that any board actions that interfere with the exercise of the shareholder franchise will invoke enhanced judicial scrutiny. In Aronson v. Lewis, the Delaware Supreme Court held that maintaining the proper balance in the allocation of power between stockholders and managers is dependent upon the stockholders’ unimpeded right to vote effectively in the election of directors. This view was echoed in Blasius Industries, Inc. v. Atlas Corporation, where Chancellor Allen ruled that judicial review under the traditional business judgment rule is inappropriate when a board of directors is acting for the primary purpose of interfering with the effectiveness of a vote. The result is enhanced judicial

48 The business judgment rule refers to the presumption that in making a business judgment the directors of a corporation acted on an informed basis, in good faith, and in the honest belief that the action taken was in the best interests of the company. Id. at 810.
49 Cf. Unitrin, Inc. v. American Gen. Corp., 651 A.2d 1361, 1390–91 (Del. 1995) (holding that the board’s adoption of a repurchase program did not have the primary purpose of interfering with or impeding the shareholders’ right to vote, and thus did not require the board to demonstrate a compelling justification for such action).
De-Democratization of Firms

2019

scrutiny (within the Unocal standard of reasonableness and proportionality) in these situations and the board of directors “bears the heavy burden of demonstrating a compelling justification for such action.” These cases can be synthesized to support the statement that challenges to shareholders’ rights to vote present the “omnipresent specter” of a conflict-of-interest that invokes enhanced judicial scrutiny under Delaware corporate law.

The Delaware corporate code (largely regarded as U.S. corporate law) also emphasizes democratic principles in the default and mandatory provisions that shape corporate governance. The Delaware General Corporation Law ("DGCL") addresses, for example, how shareholders and directors will meet, discuss, and decide on corporate actions. DGCL § 211 ensures that shareholders are provided with advance notice of meetings and that they have the opportunity to participate in and to vote at meetings (to be held within thirteen months of the last meeting). DGCL § 212 provides that each share is entitled to one vote. DGCL § 216 provides that a quorum (defined as holders of a majority of all of the shares entitled to vote, and in no event shall a quorum consist of less than one-third) must be present at a meeting in order to transact business, and that the vote of the majority of shares present constitutes the vote of shareholders. DGCL § 231 mandates the appointment of an impartial and competent inspector to oversee all elections of corporations whose securities are publicly-traded or with more than 2000 shareholders.

DGCL also recognizes that shareholders, especially minority shareholders, need special protections. DGCL § 220 grants any shareholder a right to inspect the corporation’s books, records, stock ledger, and stockholder list. DGCL § 102(b)(7) provides that while a corporation’s charter may limit a director’s personal liability to its shareholders for breaches of fiduciary duty, it may not limit a director’s liability for breaching the duty of loyalty, failing to act in good faith, engaging in intentional misconduct, knowingly violating a law, approving an unlawful dividend, or obtaining an improper personal benefit. DGCL § 262 makes appraisal rights (i.e., the right to a judicial

51 Unocal Corp. v. Mesa Petroleum Co., 493 A.2d 946, 959 (Del. 1985) (“If the stockholders are displeased with the action of their elected representatives, the powers of corporate democracy are at their disposal to turn the board out.”).
52 Blasius Indus., Inc., 564 A.2d at 661. Such burden would be met if the board can show that it knows better than shareholders what is best for the corporation. Id. at 663 (“The only justification that can . . . be offered for the action taken is that the board knows better than do the shareholders what is in the corporation’s best interest.”). Id. at 659 (“The shareholder franchise is the ideological underpinning upon which the legitimacy of directorial power rests.”).
53 See supra notes 46–52.
appraisal of “fair value”) available to stockholders who dissent to a merger.60

Federal regulation of corporations too has emphasized the principles of democracy in regulating the corporate voting process.61 Recent examples include the Dodd-Frank Act’s say-on-pay,62 prohibitions on broker discretionary voting63 and clawbacks.64 In the specific context of investment funds, the Investment Company Act of 1940 promotes equal voting by providing in two separate subsections of Section 18 that:

(d) It shall be unlawful for any registered management company to issue any warrant or right to subscribe to or purchase a security of which such company is the issuer, except in the form of warrants or rights to subscribe . . . issued exclusively and ratably to a class or classes of such company’s security holders; . . .

(i) . . . every share of stock hereafter issued by a registered management company . . . shall be a voting stock and have equal voting rights with every other outstanding voting stock.65

In sum, the corporate democracy concept has been widely used in judicial decisions, state legislation, federal rules, and academic commentary that have influenced U.S. corporate governance. But is democratic governance the correct frame of reference for firms? This question is difficult to answer in large part due to the absence of a satisfactory and consistent way to define and measure the extent to which corporate governance is “democratic.”66 Relying on the political origins and corporate adaptations of the concept of democracy outlined above, the next section takes the first step toward build-

De-Democratization of Firms

B. Conceptualizing and Measuring Corporate Democracy

The common denominators of the various accounts of a democratic regime is one that is inclusive, equal, protected, and mutually binding. Parlaying these concepts into corporate governance parlance, the term “corporate democracy” could be said to refer to a regime that invites broad participation by all shareholders, treats shareholders equally, protects shareholders (especially minority shareholders) from abuse, and provides mutually binding (rather than unilaterally binding) consultation. The remainder of this section examines in greater detail how the common corporate governance mechanisms fit within each of these four dimensions of inclusion, equality, protection, and mutuality.

1. Shareholder Meetings

Shareholder meetings provide shareholders with a forum and opportunity to voice their opinion on various corporate matters. In addition to the annual meeting where directors are elected, special meetings may also be called from time to time. Who may call a meeting? Who is invited? How is the meeting agenda set, and how will the meeting be conducted? The answers to these questions can be found in the laws of the state of the firm’s organization and the governing documents of each firm.

The most democratic option under the proposed definition of corporate democracy (inclusive, equal, protective, and mutual) would be for any shareholder to have the right to call a meeting, attend a meeting, set the meeting agenda, and participate in the deliberative process (inclusive), and for each shareholder to have the same rights (equal). Permitting any shareholder to participate in the proceedings on an equal basis regardless of the size of their stake also ensures that the minority will have the opportunity to present their case (protective) and that any business decision made by directors will be subject to ex ante or ex post consultation with shareholders (mutual). While

---

67 See Tilly, supra note 23, at 13–14 (2007) (“[A] regime is democratic to the degree that political relations between the state and its citizens feature broad, equal, protected and mutually binding consultation.”).

68 See, e.g., Del. Code Ann. tit. 8, § 211 (2000) (allowing directors to authorize a person to call a special meeting by simply amending the bylaws).

69 Id.

70 In this way, state legislatures have the ability to set the upper or lower bounds of how democratic or undemocratic firms can be. Anything in between those two bounds are set by private ordering (i.e., specified in the charter or bylaws).
this option fully upholds democratic principles, it is likely not practicable or even possible.71

On the other end of the spectrum, the least democratic option under the proposed definition of corporate democracy would be for the governing documents to provide that only the board of directors (and never shareholders) is able to call a meeting, set the meeting agenda, and decide the rules of conduct.72 While this option may be cost-efficient, it is not compatible with the principles presumed in democratic governance.73

As a compromise between democratic ideals and reality, the governing documents of a firm may provide that meetings of shareholders may only be called by the holders of at least a specified percentage of shares entitled to vote at the proposed meeting.74 In addition to these minimum holding requirements, information and advance notice requirements may be imposed upon proposing shareholders to balance their interests with the common interests of all shareholders.

2. Shareholder Voting

DGCL § 141(a) provides that the business and affairs of corporations shall be managed by directors.75 However, there are certain actions ("extraordinary actions") that so fundamentally alter the nature of the entity that

71 Debra Jeter, Randall Thomas, and Harwell Wells’ paper on Rural Electrical Cooperatives (“REC”) offers an example of why pure shareholder democracy may not be effective. See Debra C. Jeter, Randall S. Thomas & Harwell Wells, Democracy and Dysfunction: Rural Electrical Cooperatives and the Surprising Persistence of the Separation of Ownership and Control, 70 Ala. L. Rev. 361 (2018). On the other hand, the internal governance of blockchains—which resemble a true democracy—have been seriously considered by users, regulators and commentators. Yermack, supra note 15, at 8.

72 Even if shareholders consent to these rules, this result would not be compatible with the essential characteristics of a corporate democracy under the definition proposed in this Article.

De-Democratization of Firms

they must be affirmatively approved by shareholders. Under Delaware law, extraordinary actions include liquidations, dissolutions, mergers, consolidations, conversions, or sales or dispositions of all or substantially all of an entity’s assets.

The most democratic option under the proposed definition of corporate democracy (inclusive, equal, protective, and mutual) would be to require the unanimous consent of shareholders for extraordinary actions. Unanimous consent ensures that every shareholder has a vote (inclusive), that the proposed action may not move forward without her vote (equal), that minority interests are protected (protective), and that the board may not proceed unilaterally without each shareholder’s consent (mutual). However, a unanimous standard is susceptible to holdout, and has even been critiqued by some as undemocratic.

On the other end of the spectrum, the least democratic option under the proposed definition of corporate democracy would be for the governing documents to provide that no shareholder consent is required even for extraordinary actions (except to the extent required by law).

Given the practical challenges of a unanimous standard and the legal limits to a standard less than majority approval, some number between those two standards will be chosen. In addition to the number of votes that are required, how narrowly or broadly “extraordinary actions” triggering shareholder approvals are defined will affect shareholders’ ability to vote.

Shareholder appraisal rights can be a useful backstop to a less than unanimous voting standard. Appraisal rights are designed to protect the interests of investors who object to an extraordinary action that has, notwith-

76 The default standard is usually majority approval, with greater levels of approval required for transactions involving related parties. See Del. Code Ann. tit. 8, § 251(c) (2000) (“If a majority of the outstanding stock of the corporation entitled to vote thereon shall be voted for the adoption of the agreement, that fact shall be certified on the agreement by the secretary or assistant secretary of the corporation . . . .”); see also, Del. Code Ann. tit. 8, § 275(c) (“If a majority of the outstanding stock of the corporation entitled to vote thereon shall vote for the proposed dissolution, a certification of dissolution shall be filed with the Secretary of State pursuant to subsection (d) of this section.”); Del. Code Ann. tit. 8, § 204(1) (2000) (the default rule for Delaware corporations is that a company is prohibited from engaging in any business combination with any interested stockholder for a period of three years after such stockholder becomes an interested stockholder unless approved by the holders of at least two-thirds of outstanding shares of the corporation, excluding the stock owned by the interested stockholder).

77 See Del. Code Ann. tit. 8, § 275(b); Del. Code Ann. tit. 8, § 251(c); Del. Code Ann. tit. 8, § 271(a); Del. Code Ann. tit. 8, § 266(b).

78 Henry M. Robert writes: “a requirement of unanimity or near unanimity can become a form of tyranny in itself. In an assembly that tries to make such a requirement the norm, a variety of misguided feelings—reluctance to be seen as opposing the leadership, a notion that causing controversy will be frowned upon, fear of seeming an obstacle to unity—can easily lead to decisions being taken with a pseudoconsensus which in reality implies elements of default, which satisfies no one, and for which no one really assumes responsibility.” Henry M. Robert, Robert’s Rules of Order XLIV–XLV (10th ed. 2000).
standing their objection, received enough votes to be approved.79 As an example, DGCL § 262 grants the right of appraisal for shareholders who dissent to a proposed merger.80 Any dissenting shareholder that perfects her appraisal right in accordance with the procedures specified in the statute can demand an appraisal of the fair value of her shares in a court proceeding.81

3. Election and Removal of Directors

As in a civic democracy, shareholders’ ability to elect directors is an essential feature of a corporate democracy.82 Unless otherwise specified in the charter, directors are to be elected at an annual meeting of shareholders.83 Who may nominate directors? What is the voting standard required to elect, remove, or replace a director? The answers to these questions can be found in the laws of the state of the firm’s organization and the governing documents of each firm.

The most democratic option under the proposed definition of corporate democracy (inclusive, equal, protective, and mutual) would be for any stockholder to have the ability to propose a director nominee (inclusive and equal) and remove directors that do not serve their best interest (protective), in each case on the same basis as directors (mutual). One mechanism that has been developed to protect minority shareholders in the corporate context, and that has been proposed for use in the political context,84 is cumulative voting.85

79 See, e.g., Alabama By-Products Corp. v. Cede & Co., 657 A.2d 254, 258 (Del. 1995) (“[Right of appraisal] is a limited legislative remedy developed initially as a means to compensate shareholders of Delaware corporations for the loss of their common law right to prevent a merger or consolidation by refusal to consent to such transactions.”).
80 DEL. CODE ANN. tit. 8, § 262(h) (2000).
81 Id.
82 For a discussion of the role of elections in the context of civic democracy, see, e.g., SAMUEL P. HUNTINGTON, THE THIRD WAVE: DEMOCRATIZATION IN THE LATE TWENTIETH CENTURY (1991) (“Elections, open, free, and fair, are the essence of democracy, the inescapable sine qua non.”); Freeman, supra note 17, at 546 (“The American democratic system requires that the exercise of governmental or “public” power be politically accountable and subject to the rule of law. The basic notion is that citizens ought to be able to punish or reward decisionmakers by voting them in or out of office.”); Peter H. Schuck, Delegation and Democracy: Comments on David Schoenbrod, 20 CARDozo L. Rev. 775 (1999) (outlining ways, including through elections, in which agencies are held democratically accountable). For a discussion of the role of elections in the context of corporate democracy, see, e.g., Frank H. Easterbrook & Daniel R. Fischel, Voting in Corporate Law, 26 J.L. & Econ. 395, 401–02 (1983) (“[V]oters may elect directors and give them discretionary powers over things voters otherwise could control.”). On the distance between the two, see, e.g., Eugene V. Rostow, The Case Against Corporate “Democracy,” in PRIVATE GOVERNMENT 69 (Sanford A. Lakoff ed., 1973) (“[P]olitical elections often fall far short of the ideal, both in the motivation of voters, and in the level of discourse at which their franchise is solicited” whereas “the corporate election is frequently not a partial but a total farce.”).
83 See, e.g., DEL. CODE ANN. tit. 8, § 211 (2000).
84 See, e.g., LANI GUINIER, TYRANNY OF THE MAJORITY: FUNDAMENTAL FAIRNESS IN REPRESENTATIVE DEMOCRACY (1994) (proposing an “interest representation approach” in political elections, which resembles cumulative voting in corporate elections, to encourage greater electoral participation and representation).
On the other end of the spectrum, the least democratic option under the proposed definition of corporate democracy would be for directors to have the exclusive ability to nominate, approve, remove, and replace directors (again, to the extent permitted by law). The use of a standard lower than majority approval to elect directors could also result in election outcomes that do not reflect the majority will of shareholders. One mechanism that has been developed (but less frequently used) to entrench incumbents is a classified board.

One intermediate option would be to require at least a majority of shareholder approval to elect directors. And as to nominations, a compromise position would be to permit shareholders to propose a director nominee so long as they make a timely notice and follow the process outlined in the governing documents. In these cases, stockholders’ nominees may be required to deliver a written questionnaire with respect to their background and qualifications, as well as a written representation and agreement that they will not become party to any arrangement that would limit or interfere with their ability to comply with fiduciary duties. These rules are intended to ensure that any shareholder’s nominee is not beholden to the interests of that particular shareholder, but these rules also stray from democratic principles by chipping away at the mutuality between shareholder and company nominations since the same rules do not apply to the company’s nominees.

4. Fiduciary Duties

General fiduciary principles provide that an agent has a fiduciary duty to act carefully and loyally for the principal’s benefit in all matters connected with the agency relationship. In the corporate context, these fiduciary duties are the duty of loyalty and the duty of care. The duty of loyalty refers to the duty to: (1) account to and hold as trustee for the owners any property, profit, or benefit derived by the manager in the conduct and winding up of

---

86 Marcel Kahan & Edward Rock, Embattled CEOs, 88 Tex. L. Rev. 989, 1007–09 (2010) (documenting the decline of staggered boards). I find that twenty-six of the thirty-nine PPEs in the sample use a staggered board.
88 See, e.g., PennantPark Investment Corp., Amended and Restated Bylaws (2007), Section 11(a)(4) (describing the process for stockholders to nominate individuals for election to the board of directors).
89 Also, this principle is important in the political context. Moss, supra note 2, at 19 (tracing back the origins of the principle that “each member of Parliament represented the entire empire, not only those who voted him into office”).
90 Restatement (Third) of Agency § 8.01 (Am. Law Inst. 2006).
91 William M. Lafferty et al., A Brief Introduction to the Fiduciary Duties of Directors Under Delaware Law, 116 Penn. St. L. Rev. 837, 840 (2012); see also Cede & Co. v. Technicolor, Inc., 634 A.2d 345, 368 (Del. 1993) (“Duty of care and duty of loyalty are the traditional hallmarks of a fiduciary who endeavors to act in the service of a corporation and its stockholders.”).
the business; (2) refrain from acting on behalf of a party having an interest adverse to the business; and (3) refrain from competing with the business. The duty of care refers to the duty to refrain from engaging in grossly negligent or reckless conduct, intentional misconduct, or a knowing violation of law. Managers and owners may agree to modify these fiduciary duties in the governing documents with the informed consent of parties (subject to state law limitations). Equally important as the scope of fiduciary duties is who has standing to sue for breaches of fiduciary duty.

The most democratic option under the proposed definition of corporate democracy (inclusive, equal, protective, and mutual) would be for each shareholder to have the right to bring an action for breach of fiduciary duties (equal and inclusive) and for fiduciary duties to be broadly defined without exceptions (protective). On the other end, the least democratic option under the proposed definition of corporate democracy would be for fiduciary duties to be stripped down to the legally permissible minimum and for only the company itself (and not shareholders) to have standing to sue for breach of fiduciary duties.

As discussed above, some core fiduciary duties are not waivable under state corporate law. Pursuant to DGCL § 102(b)(7), companies can amend their charter to provide that directors shall not be personally liable to the corporation or stockholders for monetary damages for breach of fiduciary duty, but the charter may not eliminate director liability (a) for any breach of the director’s duty of loyalty, (b) for acts or omissions not in good faith or which involve intentional misconduct or a knowing violation of law, (c) under DGCL § 174, or (d) for any transaction from which the director derived an improper personal benefit.

On the question of who may bring a suit claiming breach of fiduciary duties, one recent development has been the emergence of a new bylaw provision that has a minimum-stake-to-sue requirement. Emergent Capital (formerly known as Imperial Holdings) was reportedly the first public corporation to impose this provision, requiring shareholders to deliver a written consent from the owners of at least 3% of the company’s outstanding shares.

---

92 Loft, Inc. v. Guth, 2 A.2d 225 (Del. Ch. 1938).
93 See Smith v. Van Gorkom, 488 A.2d 858, 873 (Del. 1985); see also Del. Code Ann. tit. 8, § 102(b)(7) (1953) (This is a provision that prohibits the waiver of director’s liability for money damages for breaches of duty of care “which involve intentional misconduct or a knowing violation of law . . . .”).
94 Since there are no fiduciary duties owed to directors, the mutuality dimension is less relevant in this context.
in order to bring a class action or derivative suit.\textsuperscript{98} The board claimed that the intent of the provision was to block frivolous suits, not insulation (as claimed by shareholders who challenged the legality of the provision). As a compromise, the chairman put the bylaw amendment up for a shareholder advisory vote, stating that he would ask the board to rescind the amendment if shareholders did not support the provision.\textsuperscript{99} This new bylaw provision is an apt example of the legal and regulatory trend toward less democratic governance regimes, and the role that other agents of shareholders (e.g., plaintiff’s lawyers) have to play in countering this trend.

5. Shareholder Information Rights (Access)

In order to properly exercise each of the aforementioned rights, shareholders need information. In the case of the previously discussed minimum-stake-to-sue provision, it is critical for shareholders to have the necessary information to bring together enough supporters to satisfy the minimum stake requirement. Shareholder access to such information as well as shareholder inspection rights can be found in the laws of the state of the firm’s organization and the governing documents of each firm.

The most democratic option under the proposed definition of corporate democracy (inclusive, equal, protective, and mutual) would be to provide every shareholder with access to any and all information that directors have access to. The least democratic option under the proposed definition of corporate democracy would be for shareholders to have no access.

The more realistic and intermediate option between these two extremes would be for shareholders to have access, but subject to specified conditions. For example, shareholders may be required to state their purpose for requesting such information, and any shareholder that is found to have adverse interests to the entity will not be granted access. In these situations, how “proper purpose” or “adverse interests” is determined, and by whom, are going to be the important threshold questions that help facilitate or stand in the way of shareholders’ democratic participation in corporate governance.

6. Amendment of Charters and Bylaws

The common feature among all of the corporate governance mechanisms described in this subsection is that they can be found in the governing documents, which are the charter and/or bylaws (or their equivalents).\textsuperscript{100} As such, the power to amend and consent to waivers from the governing docu-

\textsuperscript{99} Id.

\textsuperscript{100} Id.

If the governing documents are silent on the issue, default rules of the law of the state of the entity’s organization apply.
ments is central to evaluating the extent to which a firm’s governance structure is inclusive, equal, protective, and mutual.101

In the case of a Delaware corporation, the usual process by which charters are amended starts with the approval of such amendment by a board of directors.102 That amendment must then be approved by the affirmative vote of the majority of the total votes eligible to be cast on such matter.103 This default arrangement comports with each dimension of the proposed definition of corporate democracy (inclusive, equal, protective, and mutual).

Bylaws are considered shareholder documents, which means that shareholders may amend them (unless the charter and bylaws provide otherwise).104 The most democratic amendment process under the proposed definition of corporate democracy would be one that requires bilateral deliberation among shareholders and managers before any bylaw amendments can be made. The least democratic amendment process would be one that permits directors to exclusively and unilaterally amend the bylaws (as permitted by law).105 As a compromise between these two extremes, governing documents may provide that the power to amend bylaws will be shared between shareholders and directors.106

Table 1 summarizes each dimension of the proposed definition of corporate democracy by outlining the features that fall under the spectrum ranging from more, intermediate, to less democratic using the examples of different types of governance mechanisms and arrangements discussed above.

---

101 This principle that the amendment of the governing documents themselves requires a heightened standard of approval is a longstanding principle in the political context also. See, e.g., Moss, supra note 2, at 23 (noting that unanimous consent was required to amend the Articles of Confederation (the original U.S. Constitution)).

103 Id.

104 See, e.g., Del. Code Ann. tit. 8, § 109(a) (1953) (“After a corporation other than a nonstock corporation has received any payment for any of its stock, the power to adopt, amend or repeal bylaws shall be in the stockholders entitled to vote... Notwithstanding the foregoing, any corporation may, in its certificate of incorporation, confer the power to adopt, amend or repeal bylaws upon the directors or, in the case of a nonstock corporation, upon its governing body. The fact that such power has been so conferred upon the directors or governing body, as the case may be, shall not divest the stockholders or members of the power, nor limit their power to adopt, amend or repeal bylaws.”).

105 For example, in Maryland, the charter may include a provision that confers the power to adopt, amend, or repeal the bylaws upon the directors, divesting the stockholders of the same power. Md. Corps. & Ass’ns § 2-109(b) (2010).

106 See, e.g., Fifth Street Finance Corp., Restated Certificate of Incorporation, Article V (Board of Directors) (incorporated by reference to Exhibit 3.1 filed with Form 8-A filed on Jan. 2, 2008).

<tr>
<td><strong>Inclusive</strong></td>
<td>• each shareholder may call a meeting, attend a meeting, set the meeting agenda, nominate board candidates, and otherwise participate in the deliberative process. • unanimous consent for shareholder voting.</td>
<td>• some (but not all) shareholders (e.g., larger shareholders) may participate. • majority/ supermajority shareholder voting standards.</td>
<td>• only directors, and no shareholders, may participate. • shareholders have no vote (even for extraordinary actions).</td>
</tr>
<tr>
<td><strong>Equal</strong></td>
<td>• the above rights are available equally to all shareholders. • any shareholder has standing to sue for breaches of fiduciary duty.</td>
<td>• some shareholders have more rights than others.</td>
<td>• some shareholders have rights that others do not enjoy at all. • only select shareholders have standing to sue.</td>
</tr>
<tr>
<td><strong>Protective</strong></td>
<td>• minority shareholders have the ability to voice their opinion. • appraisal rights are available to minority shareholders. • fiduciary duties are broadly defined.</td>
<td>• some shareholders enjoy greater protections than others.</td>
<td>• fiduciary duties are narrowly defined and waivers are broadly permitted.</td>
</tr>
<tr>
<td><strong>Mutually binding</strong></td>
<td>• director decisions are subject to shareholder scrutiny. • shareholders and directors have access to the same information. • both shareholder and director consent are required to amend governing documents.</td>
<td>• only a subset of decisions is subject to mutual consultation.</td>
<td>• asymmetric information. • asymmetric procedures (shareholders’ proposals subject to greater procedural hurdles). • governing documents can be amended unilaterally by the board of directors.</td>
</tr>
</tbody>
</table>

### C. Limitations

There are fundamental differences between civic and corporate democracies which create challenges for any effort to compare the two. To begin,
consider the corporate objective and compare it to the goal of a political democracy. Many introductory Corporations classes begin with a discussion of the shareholder primacy norm, and the duty that managers have to maximize shareholder wealth.107 There is no analogous metric that elected representatives are called upon to maximize in the political context.108

While there is wide (but far from universal109) acceptance that maximization of shareholder value should be the foundational goal of the business corporation, there remains a debate about how that value should be measured and whether that goal is best achieved by empowering shareholders or managers.110 The notion of corporate democracy has proven remarkably pliable, as it has been invoked by all sides of this debate.111 On the one

107 Charles R.T. O’Kelley & Robert B. Thompson, Corporations and Other Business Associations: Cases and Materials 273 (8th ed. 2017) (discussing Dodge v. Ford as one “generally cited and understood to stand for the proposition that directors’ prime obligation is to maximize shareholder wealth.”). See also D. Gordon Smith & Cynthia A. Williams, Business Organizations: Cases, Problems, and Case Studies 403 (3rd ed. 2012) (“Despite the implication that ‘the corporation’ is something more than just ‘the shareholders,’ courts have often concluded that ‘the shareholders’ are the primary beneficiaries of the duty of care. This aspect of the duty of care is often called the ‘shareholder primacy norm.’”)

108 Of course, unemployment, approval ratings, or revenues are important metrics used to report and evaluate the performance of politicians. However, none of these metrics receive the nearly singular attention that shareholder value does in corporate law and governance.

109 While the shareholder primacy norm is not unproblematic (and has an impressive list of critics), these problems and critiques are not the subject of this Article. For a critical account of the shareholder primacy norm, see, e.g., E. Merrick Dodd, For Whom are Corporate Managers Trustees?, 45 Harv. L. Rev. 1145, 1147–48 (1932) (“Public opinion, which ultimately makes law, has made and is today making substantial strides in the direction of a view of the business corporation as an economic institution which has a social service as well as a profit-making function . . . .”). In the case where shareholders are prosocial and externalities are not perfectly separable, Oliver Hart and Luigi Zingales suggest that the appropriate objective function for a firm should be maximization of shareholder welfare. Oliver Hart & Luigi Zingales, Companies Should Maximize Shareholder Welfare Not Market Value, 2 J. L. Fin. Acct. 247 (2017). Note, however, that the corporate democracy concept has been used to promote the interests of non-shareholder stakeholders, notably, workers. As a prominent example, Paul W. Litchfield, long-time President of Goodyear Tire, believed that equality and cooperation between workers and capitalists were fundamental to the survival of the corporate form. He created a workers’ Senate and House of Representatives that would have jurisdiction over issues concerning employees. Joel Bakan, The Corporation: The Pathological Pursuit of Profit and Power 19 (2004) (citing Jeffrey L. Roodenberg, The Legend of Good-Year: The First 100 Years (1997)).

The critics of managerial autonomy have long preached democracy as the manifest remedy for feudalism: if only shareholders could be more fully informed, protected by better proxy rules, and given cumulative voting and easier access to stockholders’ lists, they urge, the stockholders’ annual meeting would become a meaningful source of authority for the directors, and a meaningful procedure for reviewing their stewardship.

111 Edward Freeman writes that the term “corporate democracy” has come to have at least four meanings: increasing the role of government, increasing citizen or public interest participation in managing corporate affairs, encouraging or mandating the active participation of
hand, the corporate democracy metaphor has been used to invigorate the
discussion of how to expand shareholder rights. On the other hand, the
metaphor has also been used as a basis to legitimize the power and control
given to managers elected through purportedly democratic procedures.

Another key difference between corporate and political democracies is
that vote buying is almost always illegal in political elections, whereas in
corporate elections the only way to obtain a vote is by buying one. On this
basis, Donald Smythe has suggested that democratic voting structures are
not compatible with the model of the large corporation. Colleen Dunlavý’s
detailed historical account challenges this suggestion by showing that the
norm in early nineteenth century corporations was to give one vote to each
shareholder (rather than each share). Modern partnerships still retain this
rule, where the default rule is one partner one vote (unless the partnership
agreement specifies otherwise). In any event, the possibility of deviating
from the one person one vote norm is a key distinction between corporate
and civic democracies.

Notably absent from the corporate context are the instruments that sup-
port a democracy, such as competition between multiple parties. The fact
that there is no real contest in corporate elections has been well-docu-
mented. In the Myth of the Shareholder Franchise, Lucian Bebchuk re-
ports that during the proxy seasons of the 1996–2005 decade, incumbents
faced challenges from rivals in only 118 cases. Among companies with

---

112 MACEY, supra note 3, at 11 (“[M]uch of the recent talk among legal scholars and
regulators has focused heavily on the question of how to ‘improve’ shareholder democracy by
expanding shareholders’ voting rights.”).
113 Dalia Tsuk Mitchell, Shareholders as Proxies: The Contours of Shareholder Demo-
cracy, 63 WASH. & LEE L. REV. 1503, 1506 (2006) (“History shows that attempts that appeared
to foster shareholder democracy, independent of financial demands, were never really about
promoting the shareholders’ active involvement in managing the affairs of their corporations.
Rather, reformers used the rhetoric of shareholder democracy to promote broader goals and
visions.”); ROBERT A. DAHL, WHO GOVERNS? DEMOCRACY AND POWER IN AN AMERICAN CITY
112 (2d ed. 2005) (“democratic ceremonials and codes help to clothe the decisions of the
leaders with legitimacy . . .”).
114 Richard L. Hasen, Vote Buying, 88 CAL. L. REV. 1323 (2000). In Colleen A. Dunlavý,
Social Conceptions of the Corporation: Insights from the History of Shareholder Voting
Rights, 63 WASH. & LEE L. REV. 1347 (2006), Dunlavý critiques the plutocratic nature of
voting in corporations – i.e., that people with more shares (i.e., wealth) have more votes.
Dunlavý, supra note 43.
115 Donald J. Smythe, Shareholder Democracy and the Economic Purpose of the Corpora-
tion, 63 WASH. & LEE L. REV. 1407, 1418–19 (2006) (“The common law rule of one-vote-per-
shareholder clearly would have impeded the growth of these new mass-production industries,
and so it is no surprise that it had faded long before the end of the nineteenth century.”).
116 Dunlavý, supra note 43.
117 See REVISED UNIF. P’SHIP ACT (1997) § 401(f). The case study in Part II includes
partnerships and limited liability companies (in addition to corporations).
118 For empirical work documenting how rare contested elections are in the corporate con-
text, see Lucian A. Bebchuk, The Myth of the Shareholder Franchise, 93 VA. L. REV. 675
(2007).
119 Id.
market capitalizations exceeding $200 million, there were only twenty-four cases, and of those, the rival slate won in only eight of them. Bebchuk concludes that “for directors of public companies, the incidence of replacement by a rival slate seeking to manage the company better as a stand-alone entity is negligible” (emphasis added).120 Bebchuk, too, does not view “shareholder voice” and “corporate democracy” as ends in themselves121 but rather, “a valuable instrument for enhancing shareholder value by making boards more accountable and more attentive to shareholder interests.”122

Loizos Heracleous and Luh Lan present their findings from a study of the incidence of lawsuits attempting to unseat directors.123 In *The Myth of Shareholder Capitalism*, published in 2010, Heracleous and Lan report that shareholders attempted to unseat directors through lawsuits only twenty-four times in the last twenty years and of those twenty-four attempts, only eight succeeded.124 They observe that “directors are to a great extent autonomous” (emphasis added).125 The wide discretion given to directors under the Delaware General Corporation code and the business judgment rule provide further evidence of this autonomy.126

It should however be noted that the option to exit is more readily available in the corporate context. As noted by Usha Rodrigues, shareholder votes are generally an empty exercise127 but shareholders have the power of easy exit (referred to also as the “Wall Street Rule”).128

In light of the above noted differences, together with tradeoffs that must be made between fairness and efficiency, it would be naïve to assume that identity between civic and corporate democracies are feasible or even desirable. The point made here is not that firms should be democratically organ-

---

120 *Id.* at 677.
124 *Id.*
125 *Id.*
De-Democratization of Firms

ized, but that the further they deviate from democratic principles of governance, the greater an error it would be to refer to these firms as democratic.

Despite its many flaws and limitations, the metaphor of corporate democracy has endured, and could even be said to be expanding. Developing a uniform conceptual framework as proposed here is helpful to understand the extent to which corporate governance deviates from democratic principles of governance and to explore the implications of any gaps.129

II. CASE STUDY OF PUBLIC-PRIVATE EQUITY (PPE)

It was established in Part I that a democratic regime refers to one that is inclusive, equal, protected, and mutual, and conversely, that de-democratization refers to a migration to a regime that is less inclusive, less equal, less protected, and less mutually-binding. Part I also examined how the mechanisms used to empower shareholders (e.g., shareholder meetings, shareholder voting, information rights) and to hold managers accountable (e.g., director elections, fiduciary duties, and appraisal rights) fall along the spectrum of more to less democratic across the four dimensions that make up the proposed definition of corporate democracy.

This part of the Article uses a case study of PPEs to put the definitional and conceptual framework of corporate democracy developed in Part I to work.130 More detailed information about these firms are provided in the Appendices. As of January 1, 2017, there were 39 private equity firms and funds that were publicly traded in the United States. This part examines the governance structures of these thirty-nine PPEs at the time of their initial public offering (“IPO”) to evaluate the extent of democratization within this segment of firms.131

Private equity firms and funds pool the capital of individual and institutional investors for investment in other businesses. Unlike mutual funds, private equity traditionally drew funds from wealthy investors and were structured as private limited partnerships. In recent years however, more and more private equity structures have made the decision to go public. PPEs are an appropriate subject for this case study as these are entities that have ad-

129 See Mancur Olson, Dictatorship, Democracy, and Development, 87 Am. Pol. Sci. Rev. 567, 570 (1993) (noting that while “[d]emocracies vary so much that no one conclusion can cover all cases. . . . many practical insights can be obtained by thinking first about one of the simplest democratic situations”); Robert A. Dahl, Who Governs? Democracy and Power in an American City 163 (2d ed. 2005) (“Because of widespread belief in the democratic creed, however, overt relationships of influence are frequently accompanied by democratic ceremonials, which, though ceremonial, are not devoid of consequences for the distribution of influence.”).

130 PPEs include firms that employ a private equity strategy (leveraged buyout) and are publicly-listed on the U.S. national stock exchanges. For more details about the PPE sample, see Kim, supra note 9.

131 See Appendix A for a list of the firms that comprise this case study and their ticker symbols.
justed their once highly private and sophisticated governance structures to accommodate and market themselves to public shareholders. The organizational and contractual features that are chosen by these firms reveal the balance that has been struck between shareholder and managerial powers within these newly public institutions.

A. Shareholder Meetings

The governing documents of thirty-eight out of thirty-nine PPEs include provisions relating to shareholder meetings. One PPE’s governing documents are silent on the issue, which means that default rules apply. The default rule in Texas is that a special meeting of shareholders may be called by the president, the board, or anyone authorized in the charter or bylaws, and a special meeting of the shareholders may also be called by the holders of at least 10% of all of the shares of the corporation entitled to vote.

Fifteen PPEs limit the power to call shareholder meetings to directors or managers. Twenty-three PPEs permit shareholders to call a meeting, but specify some minimum amount of ownership interests (ranging from 10%, 20%, 25%, 50%, or a majority) that must be met in order for a shareholder to call a special meeting. Unsurprisingly, no PPE provides that any shareholder may call a special meeting.

In the twenty-three cases where shareholders have the power to call a shareholder meeting, the requesting shareholders are responsible for related expenses. The standard process is for the corporate secretary to first inform the stockholders of the reasonably estimated costs of sending the notice for the meeting, and the secretary is required to call such meeting only after receiving payment of such costs. Also, the corporation has the power to set the record date for determining whether stockholders are entitled to call a

---

132 The data referred to in this section can be found in Appendices B & C.
133 See Appendix B for a detailed breakdown.
135 For a further breakdown, thirteen firms require majority, four firms require 50%, one firm requires 25%, two firms require 20%, and two firms require 10%.
136 See, e.g., Md. CORPS. & ASS’NS § 2-502(b)(3) (requiring shareholders requesting a special meeting to pay related costs).
137 Specifically, it says:

The Secretary shall inform such stockholders of the reasonably estimated cost of preparing and mailing the notice of the meeting (including the Corporation’s proxy materials). The Secretary shall not be required to call a special meeting upon a stockholder request and such meeting shall not be held unless, in addition to the documents required by subsection (b)(2) of this Section 2.3, the Secretary receives payment of such reasonably estimated cost prior to the mailing of any notice of the meeting.

TRIANGLE CAPITAL CORPORATION, AMENDED AND RESTATED BYLAWS, Section 2.3(b)(3) (Special Meetings) (Dec. 29, 2006).
meeting. A group of shareholders that meet the specified ownership requirement on one day may well fail to meet it on another. Not only that, the corporation sets the record dates for determining the shareholder who will receive notice of and will be able to vote at the meeting.

Supposing a shareholder has the requisite number of shares and the means and willingness to pay for all related costs, how does this shareholder call a meeting? The governing documents will specify the applicable time limits and procedural requirements (usually implemented by the corporate secretary). At a minimum, a proposing shareholder is required to describe the business proposed (including in some cases the complete text of the proposal). In some cases, the proposing shareholder must provide the reason for requesting such business and disclose any material interests the shareholder has in connection with such proposal, as well as provide the name, address, class, and number of shares beneficially owned by each shareholder supporting the proposal. More onerous requirements include disclosure of any short interest, derivative instruments, dividends, and performance-related fees on securities owned by such shareholders (including their affiliates and associates) with respect to not only the corporation but also its principal competitors.

\(^{146}\) The term “SH” in Table 2 refers to shareholders.

\(^{147}\) Two PPEs expressly provide so in their charter and one PPE is a Texas entity.
one Texas entity) governing documents are silent on this issue, which means that default rules apply. 148 Under Delaware law, any action required to be taken at a shareholder meeting may be effected by written consent by stockholders not having less than the minimum number of votes necessary to take the action in question at a meeting of shareholders. 149 Under Maryland law, stockholders may act without a meeting only if there is unanimous written (or electronically transmitted) consent on the issue. 150 The default rule in Texas is the same as in Maryland. 151

Nine PPEs explicitly provide in their charters that shareholder decisions may be made by written consent. However, a number of these firms impose a requirement of pre-approval by directors or managers (three PPEs), unanimous approval by shareholders (three PPEs), or either unanimous consent or director approval (one PPE) which create challenges to shareholder decision-making through written consent. One PPE provides that a majority of shareholders’ consent will be sufficient and one PPE provides that the same voting thresholds as in-person meetings apply to written consents (the same standard as the default Delaware rule).

Seven PPEs prohibit the use of written consent altogether, meaning that any action required to be taken by shareholders (unlike actions required to be taken by directors) may be effected only at a duly called in person meeting.

De-Democratization of Firms

default rules apply. Under Delaware law, the default rule is that in the case of mergers, the board must first approve the merger agreement and declare it advisable, and the merger agreement must then be approved by the majority vote of the outstanding shares entitled to vote on the matter. In the case of conversions, Delaware law does not require a shareholder vote if no shares of stock have been issued prior to the adoption of the board resolution approving the conversion. In the case of voluntary dissolutions, Delaware law provides that directors must first approve the dissolution and declare it advisable, then submit it to shareholders and majority shareholder approval is required. In the case of involuntary dissolutions, Delaware law provides that any shareholder may make an application to the Court of Chancery to appoint a custodian or receiver under exceptional circumstances.

As for the twenty-three PPEs that include the relevant provisions in their governing documents, their policies on shareholder voting fall under four variations (listed below in the order of most to least democratic according to the proposed definition):

- Variation 1 (supermajority): approval by shareholders holding a supermajority of shares is required to approve extraordinary actions (one PPE).
- Variation 2 (majority/supermajority combination): approval by shareholders holding a supermajority of shares is required for some extraordinary actions (e.g., conversion to an open-ended fund, liquidations, dissolutions, mergers resulting in substantially different anti-takeover provisions), otherwise, majority shareholder approval will suffice (fifteen PPEs).
- Variation 3 (majority/Delaware default): approval by shareholders holding a majority of shares is required for extraordinary actions (two PPEs).
- Variation 4 (no shareholder approval under specified conditions) (five PPEs):
  - Two PPEs have what is called a “control condition,” which gives the manager discretion over all significant corporate actions during any period that the insiders hold greater than a specified amount of total shares (this amount is 10% in the

155 See Appendix D for a detailed breakdown.
156 A shareholder vote is not required if the charter and shares remain the same, the company is merging with or into a wholly-owned subsidiary, or for “short form” mergers. Del. Code Ann. tit. 8, §§ 251, 253, 267 (2017).
159 Del. Code Ann. tit. 8, § 226 (2010). These exceptional circumstances are: (1) if a division among stockholders has resulted in their failing to elect successors to directors whose terms have expired, (2) if deadlock among directors has resulted in irreparable injury of the corporation, or (3) if the corporation has abandoned its business without liquidating or distributing its assets.
case of Apollo Global Management\textsuperscript{160} and 40\% in the case of Fortress Investment Group\textsuperscript{161}).

- In one PPE, the shareholder vote can be avoided if specified conditions (price, type of consideration, verification that no financial assistance is provided to the buyer by the corporation, and mailing of proxy statement) are met.\textsuperscript{162}
- One PPE opts out of DGCL §203 if the business combination has been approved by disinterested members of the board.\textsuperscript{163}
- In one PPE, the shareholder vote can be avoided if the company receives a legal opinion that the transaction will not result in the loss of limited liability, the sole purpose is a change in legal form, and the members and managers have substantially the same rights and obligations thereafter.\textsuperscript{164}

What protections are available to minority investors who oppose an extraordinary action? So long as they are given advance notice of such action, they have the option to vote with their feet by selling their shares in the public markets. In addition, appraisal rights may provide another avenue for protection. However, appraisal rights are not available in four PPEs and are available only by express permission of directors in eight PPEs.\textsuperscript{166} For the twenty-seven PPEs (twenty-two are Delaware entities, four are Maryland entities, and one is a Texas entity) whose governing documents are silent on this issue, default rules apply. In Delaware, appraisal rights are available only in a merger and only to shareholders who have not voted in favor of

such merger, among other requirements that are specified in the statute. In Maryland, appraisal rights are available to shareholders in a merger, exchange, conversion transfer of assets, charter amendment altering the contractual rights of outstanding stock, and business combinations, and only to shareholders who have not voted in favor of the transaction and have also satisfied the other requirements specified in the statute. In Texas, appraisal rights are available to shareholders in a merger, exchange, conversion, and sale of all or substantially all assets. In the context of appraisal rights, Maryland’s rules are most democratic (more inclusive and protective), followed by Texas, then Delaware.

C. Election and Removal of Directors

In twenty-two PPEs, a plurality of the votes cast is sufficient to elect a director. This means that just a single vote cast in favor of a director will be sufficient for their election in cases where there are an equal number of candidates and open seats. One PPE permits cumulative voting, except the provisions are designed to protect insiders (rather than minority holders, as is the norm) and twenty-five PPEs adopt a staggered board structure, which is a commonly used entrenchment mechanism.
One notable feature observed in twelve PPEs is the bifurcation of the board of directors between continuing directors and ordinary directors.\textsuperscript{174} The term “continuing directors” is used to refer to the initial directors named in the charter as well as the directors whose nomination for election have been approved by such initial directors.\textsuperscript{175} Some PPEs include additional eligibility requirements, such as service as a director for at least twelve months or a requirement that the director is not an affiliate of any person who is proposing to enter into a business combination with the entity.

While there are a number of different ways in which the term “continuing directors” is defined, the intent for creating this separate tier of directors is one and the same. The intent is to confer outsized decision-making power to these continuing directors, which in the case of a PPE are often the founders of the PPE’s predecessor entity.

Notably, matters that have been approved by a majority of continuing directors bypass or undergo a lighter review by ordinary (non-continuing) directors (and by shareholders). For instance, an extraordinary action that would otherwise require the approval of at least 80\% of shareholders may require the approval of only 50\% of shareholders if such matter has been pre-approved by the majority of continuing directors.\textsuperscript{176} In cases where there is only one continuing director, the extraordinary action must be pre-approved by that single director.\textsuperscript{177} There is no quorum requirement for an approval by continuing directors. This feature has the effect of narrowing the segment of directors who enjoy extensive power (including, in some cases, veto rights) over the fundamental decisions regarding these firms.

There is quite a bit of variation among PPEs as to whether a director may be removed without cause and as to the number of votes required for such removal.\textsuperscript{178} Nine PPEs permit removal with or without cause by a vote of shareholders. Twenty-two PPEs permit removal for cause only (three require a majority vote, twelve require a two-thirds vote, and seven require a three-fourths vote). Three PPEs do not provide shareholders with the right to remove directors (even for cause and even if there is unanimous consent). Five PPEs’ (all Maryland entities) governing documents are silent on the issue, which means that default rules apply. The default rule in Maryland is that directors may be removed, with or without cause, by a majority shareholder vote.\textsuperscript{179}

D. Fiduciary Duties\(^{181}\)

Eight PPEs’ (five are Delaware limited liability companies, one is a Delaware corporation, one is a Texas corporation, and one is a Maryland corporation) charters (or their equivalent) are silent about fiduciary duties, which means default rules apply. As limitations of liability are opt-in provisions (i.e., a charter must affirmatively include language which limits liability in order for the limitations to be valid), if a PPE’s charter is silent on the issue, directors remain liable without any limitations.

With respect to the five PPEs that are organized as Delaware limited liability companies, Section 18-1101(c) of the Delaware Limited Liability Company Act provides that the limited liability company agreement may expand or restrict a member’s or manager’s duty, but that the limited liability company agreement may not eliminate the implied contractual covenant of good faith and fair dealing.\(^{182}\) For Delaware corporations, the DGCL provides that a corporation’s charter may restrict a director’s duty, but that the charter may not eliminate liability for breaches of certain duties listed under DGCL § 102(b)(7) (discussed below).

Under Maryland law, the charter may restrict a director’s (as well as an officer’s) personal liability to the corporation and its stockholders for monetary damages, except that the charter may not eliminate liability for breaches of certain duties listed under Section 5-418 of Courts and Judicial Proceedings (discussed below).\(^{183}\)

Under Texas law, the charter may restrict a governing person’s liability for monetary damages, except that the charter may not eliminate liability for

---

\(^{180}\) Nine expressly provide so in their charter and five are Maryland entities.

\(^{181}\) The data referred to in this section can be found in Appendix H.

\(^{182}\) 6 DE CODE § 18-1101(c) (2016).

\(^{183}\) CTS. & JUD. PROC. § 5-418 (2019).
a breach of the person’s duty of liability, an act or omission not in good faith that constitutes a breach of duty or involves intentional misconduct or a knowing violation of law, or a transaction from which the person received an improper benefit.184

Twelve PPEs include the DGCL § 102(b)(7) provision in their charters. This means that directors will not be personally liable to shareholders for breaches of fiduciary duty, except for breaches of the duty of loyalty, failing to act in good faith, engaging in intentional misconduct, knowingly violating a law, approving an unlawful dividend, or obtaining an improper personal benefit.185

If the Delaware legislature were to amend Section 102(b)(7) to further broaden the scope of fiduciary duties for which directors may be exculpated, the directors of a number of these PPEs would retrospectively receive the benefit of this expansion. This is because several PPE charters include language that automatically incorporates those additional protections. The following is an example of such language: “If the DGCL is hereafter amended to permit further elimination or limitation of the personal liability of directors, then the liability of a director of the Corporation shall be eliminated or limited to the fullest extent permitted by the DGCL, as so amended.”

The charters of eight PPEs that are organized in Delaware include open-ended language to achieve the same effect by limiting the liability of agents to the maximum extent permitted by Delaware law. The charters of eleven PPEs that are organized in Maryland include open-ended language to achieve the same effect by limiting the liability of agents to the maximum extent permitted by Maryland law. Under current Maryland law, directors (and officers) will not be personally liable for breaches of fiduciary duty, except for (a) actual receipts of an improper benefit or profit in money, property, or services and (b) active and deliberate dishonesty established by a final judgment.186

Note that each of these provisions automatically incorporate amendments to the corporate code only if the code is amended to afford directors greater protections (e.g., expanding the scope of waivers of liability). This one-way application means that the scope of fiduciary duties will either remain the same or decrease (but not expand) throughout the life of these PPEs.

E. Information Rights187

Nine PPEs’ (six are Delaware entities, two are Maryland entities, and one is a Texas entity) governing documents are silent on this issue, which

186 Md. Corps. & Ass’ns § 2-405.2(a) (2019).
187 Appendix I provides a detailed breakdown.
De-Democratization of Firms

means that default rules apply. In Delaware, the books and records of any Delaware corporation must be maintained in a form that is reproducible within a reasonable time upon the request of any person entitled to inspect them.\footnote{Del. Code Ann., tit. 8, § 224 (2017).} Any shareholder of a Delaware corporation may, upon written demand under oath stating a proper purpose, inspect and copy the books, records, stock ledger, and stockholder list during normal business hours.\footnote{Del. Code Ann., tit. 8, § 220 (2003).}

In Maryland, any shareholder may, upon written request, inspect and copy the bylaws, minutes, annual reports or voting trust agreements located in the corporation’s principal office during normal business hours.\footnote{Md. Corps. & Ass’ns § 2-512 (2019).} In addition, shareholders holding at least 5% of the outstanding stock of any class of a Maryland corporation may, upon written request, inspect and copy the books of account and stock ledger during normal business hours.\footnote{Md. Corps. & Ass’ns § 2-513 (2019).}

In Texas, any shareholder that has held shares for at least six months or holds at least 5% of the outstanding stock of any class may, upon written request stating a proper purpose, examine and copy the corporation’s books, records of account, minutes, and share transfer records.\footnote{Tex. Bus. Orgs. Code Ann. § 21.218 (2017).} In this context, the Delaware rule is the most democratic (most inclusive) according to the proposed definition of corporate democracy, followed by Texas then Maryland.

Fourteen PPEs expressly permit shareholders to examine lists of shareholders for purposes that are germane to that meeting. Even if shareholders have a proper purpose for requesting an inspection, thirteen PPEs prohibit shareholders from doing so if the board of directors determines that the shareholder may have any improper purpose for requesting such inspection. In some cases, any shareholder that seeks to gather information to determine whether to pursue litigation or assist in pending litigation against the company (except pursuant to the applicable rules of discovery relating to litigation) is deemed to be acting in connection with an improper purpose, which strips such shareholder of all information rights.\footnote{E.g., Ares Management, L.P., Bylaws, Section 3.4 (Rights of Limited Partners) (2014).}

Most companies will also require the stockholder to bear the expenses of such inspection (and any copies or extractions made) and also to make a written demand under oath stating the purpose and that the stockholder has the right to inspect the books and records.\footnote{E.g., Fifth Street Finance Corp., Third Amended and Restated Bylaws (Incorporated by Reference to Exhibit 3.1 filed with Form S-K filed on Sep. 2, 2016) Article VIII (General Provisions) (2016).}
F. Amendment of Charters/Bylaws

How are charters amended in PPEs? Ten PPEs’ (nine are Delaware entities and one is a Maryland entity) charters are silent on this issue, which means default rules apply. In Maryland, a corporation may amend its charter by the affirmative vote of two-thirds of outstanding stock of each class entitled to vote. In Delaware, a corporation may amend its charter by the affirmative vote of a majority of the outstanding stock entitled to vote. In this context, Maryland’s rule is more democratic (more inclusive) than the corresponding Delaware provision according to the proposed definition of corporate democracy.

Fifteen PPEs’ charters require shareholder approval of charter amendments, and fourteen of these fifteen PPEs require supermajority vote to amend or repeal certain sections of the charter. Fourteen PPEs’ charters provide that the corporation reserves the exclusive right to amend the charter.

How are bylaws amended in PPEs? Two PPEs (both are Delaware entities) are silent on this issue, which means default rules apply. In Delaware, the default rule is that the power to adopt, amend, or repeal bylaws rest with the shareholders. Four PPEs follow this approach, providing that only shareholders have the power to alter bylaw provisions. Four PPEs provide that joint approval by both managers and shareholders is required to amend bylaws. Eleven PPEs provide that bylaws may be amended by the approval of either managers or shareholders. Eighteen PPEs allow bylaws to be amended only by managers. In the case of these PPEs, midstream changes to bylaw provisions can be effectuated without approval by or prior notice to shareholders.

195 Appendix J provides a detailed breakdown.
196 Md. Corps. & Ass’ns §§ 2-601, 604(e), 506(b) (2019).
198 See, e.g., Solar Capital Ltd., Amended and Restated Bylaws, Article VI Section 6.2 (2010) (“The affirmative vote of the holders of shares entitled to cast at least 80 percent of the votes entitled to be cast on the matter, each voting as a separate class, shall be necessary to effect: Any amendment to the charter of the Corporation to make the Corporation’s Common Stock a ‘redeemable security’ or the conversion of the Corporation . . . from a ‘closed-end company’ to an ‘open-end company.’”).

* * *

In summary, one-third of the PPEs do not give shareholders the right to call a meeting (even if 100% of them desire it), and in nearly half of the PPEs, half or more shareholders must come together before they can initiate a meeting. It should be noted that boards of directors (or their equivalents) have the sole power to set the record date for determining the pool of stockholders whose votes will matter for determining whether a particular voting threshold is met or not.\(^{201}\)

In the realm of shareholder voting, more than 40% of PPEs follow the default rule in Delaware, which requires majority approval of shareholders for most extraordinary actions. Transactions that involve related parties require greater levels of shareholder approval.\(^{202}\)

In the election and removal of directors, the ease with which incumbents retain power, in contrast to the relative difficulty of removing directors, together with the use of entrenchment mechanisms (such as staggered boards and continuing boards), create barriers to achieving a democratic governance structure.

With respect to director and officer liability for breaches of duties owed to the entity and to the shareholders, there are only two PPEs that place no limitations on the scope of such liability.

As for shareholder inspection rights, there are usually two commonly applied conditions to shareholders’ inspection rights, as discussed above in Part I.B.5. One condition is proper purpose and the other is confidentiality. Ultimately, the board of directors or the corporate secretary has the right to determine whether a shareholder’s purpose is proper or improper and whether the requested information relates to information that is confiden-

\(^{200}\) Two PPEs expressly provide so in their governing documents, four PPEs are Delaware entities, where this is the default rule.

\(^{201}\) MD. CORPS. & ASS’NS § 2-502(e) (2019).

\(^{202}\) See, e.g., DEL. CODE ANN. tit. 8, § 204(1) (2018) (default rule for Delaware corporations is that a company is prohibited from engaging in any business combination with any interested stockholder for a period of three years after such stockholder becomes an interested stockholder unless approved by the holders of at least two-thirds of outstanding shares of the corporation, excluding the stock owned by the interested stockholder); DEL. CODE ANN. tit. 8, § 203 (approving transactions/business combinations with an interested stockholder requires two-thirds vote of the outstanding stock that is not held by an interested holder, where an interested holder is a stockholder who beneficially owns 15% or more stock).
Given the wide discretion enjoyed by the board (or secretary, who is appointed by the board) in making such determinations as well as how broadly “improper purpose” is defined in the PPE’s governing documents, the inspection rights of shareholders, while useful, may be unavailable or limited when they are most needed. What is perhaps most problematic for democratic governance is that each of the aforementioned provisions may be unilaterally amended by the managers.

In reviewing the governing documents of PPEs, this Article finds that these firms are varied in their governance structures but trend toward less democratic structures. It is worth reiterating that there are good reasons for firms to organize themselves this way. The point here is not that every shareholder should have the power to propose a meeting, or be entitled to make demands to inspect company books and records at any time, or that these endeavors should be costless to the requesting shareholder. Rather, the goal is to recognize that it would be a mistake to call these firms “democratic” in light of the barriers that exist (often justifiably) to shareholders’ participation in corporate governance.

III. Catalysts of De-Democratization

Part II documented how a subset of firms (PPEs) have adopted governance structures that stray from the democratic ideals of inclusion, equality, protection, and mutuality. The case study, though informative, is limited to thirty-nine firms. What, if any, broader trends can we observe about the relationship between corporate and civic democracies? This part of the paper documents recent market, legal, and regulatory developments that have facilitated the de-democratization of corporate governance more broadly across all segments of firms.

First, how inclusive is corporate governance? While more than half of Americans say they currently have money in the stock market, this is the lowest ownership rate in Gallup’s nineteen-year trend. William Bratton and Michael Wachter provide a further breakdown by explaining that the model shareholder is “rich, old, white, and in the top 1% of the income distribution” and “the top 10% owns 81% of the stock, while the bottom 80% accounts for only 9% of shares.” These statistics evidence a narrow-

De-Democratization of Firms

ing of the segment of shareholders that comprise the United States’ “shareholder culture.”

Another example of de-democratization—on the dimension of equality—that has attracted quite a bit of recent attention is dual class stock offerings. The effect of a dual class structure is to provide certain shareholders voting rights that are greater than their economic stake. All of the U.S. stock exchanges allow companies to issue different classes of stock with unequal voting rights in an IPO. Facebook, Alphabet, LinkedIn, and Groupon have all gone public with dual class stock that give insiders greater voting power. Returning to the case study for a moment, eleven out of thirty-nine PPEs (ACAS, APO, ARES, CG, CODI, FIG, FNFV, FSAM, KKR, OAK, and PJT) also use a dual class structure.

This is not distinctly a U.S. phenomenon. Institutional Shareholder Services (ISS), in collaboration with Shearman & Sterling LLP and the European Corporate Governance Institute, produced a study of Control Enhancing Mechanisms (CEMs) used by European companies which do not follow the proportionality principle (diversions from the ‘one share - one vote’ principle). Of the 464 European companies that were considered, 44% were found to have one or more CEMs.

In addition to dual class stock offerings, other developments have had the effect of giving certain shareholders voting rights that are less than their economic stake. Control share acquisition statutes that have been adopted in

a growing number of states allow firms to limit the voting power of potential acquirers.222 An acquirer who purchases shares beyond a certain threshold percentage may not vote any shares in excess of that percentage. Shareholder rights plans (poison pills), if triggered, also disproportionately reduce the voting power of a hostile bidder.223

These recent developments go against what was once the bedrock principle in corporate governance—the one share-one vote rule—which was first introduced by the New York Stock Exchange (“NYSE”) in 1926.224 The NYSE later retired the rule in 1986.225 Two years later in 1988, the Securities and Exchange Commission (“SEC”) adopted Rule 19c-4 to prohibit issuers from issuing any class of shares “with the effect of nullifying, restricting, or disparately reducing” the voting rights of existing holders of common stock.226 Eventually, the D.C. Circuit Court invalidated Rule 19c-4 by holding that the SEC did not have the authority to adopt corporate governance rules that encroached upon state corporate governance standards.227

The development of proxy access follows a similar storyline to shareholder voting.228 Proxy access, which refers to the ability of shareholders to place alternative board candidates on the company’s proxy card at the annual shareholder meeting, has the goal of making boards more responsive to shareholder interests.229 The Dodd-Frank Wall Street Reform and Consumer Protection Act affirmed the SEC’s authority to issue a proxy access rule,230 and the SEC approved Rule 14a-11, which made it easier for shareholders to...

225 See Macey, supra note 3, at 113 (discussing how the NYSE retired its one-share, one-vote listing requirement to avoid losing two of its most valuable listings—GM and Dow Jones).

230 See Dodd-Frank Wall Street Reform and Consumer Protection Act, 124 STAT. 1376, § 971.
nominate candidates for corporate boards. The D.C. Circuit Court, however, invalidated Rule 14a-11, holding that the SEC had acted “arbitrarily and capriciously” by failing to consider the rule’s effect on efficiency, competition, and capital formation.

It is worth noting that the one-vote-one-share rule and proxy access have persisted. Since 1994, the NYSE and NASDAQ both prohibit dual class recapitalizations without shareholder approval. Also, in the case of proxy access, it has been reported in 2016 that more than 35% of S&P 500 companies have adopted proxy access. Nonetheless, the prevalence of dual class stock and barriers to proxy access ultimately show that market, legal, and regulatory forces have worked together to facilitate a shareholder class that is less inclusive and a voting structure that is less equal among modern firms.

There is some evidence, however, that corporate governance has become more democratic in some respects. John Coffee and Darius Palia have surveyed the changing structure of shareholder ownership and discussed how hedge funds have emerged as new and temporary shareholder majorities. Coffee and Palia explain that hedge fund activism has increased because costs of activism have declined due to the development of a new tactic (the “wolf pack”) that enables hedge funds to take collective action without legally forming a “group” that would trigger corporate defenses and federal securities regulation.
Marcel Kahan and Edward Rock have also documented how CEOs of publicly-held corporations in the U.S. are “losing power” to directors and shareholders. They identify a “new era” of corporate governance where “power over the U.S. corporate enterprise is more evenly distributed between various participants—inside managers, outside directors, and shareholders—rather than concentrated in the hands of the CEO.”

Each of these developments provide a new lens through which the democratization or de-democratization of firms should be observed. Who does the shareholder in “shareholder democracy” refer to? Also, the agency theory of firms views shareholders as principals, who elect managers, their agents, to manage the firms on their behalf. Under this framework, where each shareholder is deemed a principal, but where some own greater pieces than others, some are individuals and others are institutions, some are domestic and others are foreign, some have more information, knowledge, wealth, status, access, and other resources than others (with reports that this gap is growing)—who is the principal? On whose behalf are firms governed, to whom are fiduciary duties owed, and whose welfare are managers to maximize? And when different shareholders have different preferences about core business decisions, whose preference prevails? A partial answer to these important questions and the implications for the relationship between firms and governments are addressed in the following Part IV.

IV. IMPLICATIONS OF THE DE-DEMOCRATIZATION TRENDS

Discussions about the misfit of democratic principles with corporate governance, and even doubts that a corporate democracy ever existed, are hardly new. This Article provides further evidence of de-democratization and exposes contradictions and inconsistencies in the widespread use of the corporate democracy metaphor in U.S. corporate governance. This last Part of the Article explores the implications of this gap between myth and reality.

This Article surveys the relevant literature and identifies three main accounts of the relationship between firms and government—as substitutes, complements, and models—and discusses how de-democratization impacts each of these accounts. The guiding principle of this Part is that an examination of the implications of de-democratization must be connected to why and how the corporate democracy metaphor is being used in the first place.

239 Marcel Kahan & Edward Rock, Embattled CEOs, 88 Tex. L. Rev. 989, 989 (2010).
240 Id.
241 This inquiry is further complicated by the fact that there are again multiple layers of agents here. Managers owe fiduciary duties to shareholders (governed by state common law—e.g., Delaware case law) who in the case of institutions owe fiduciary duties to their underlying investors (governed by federal regulations—e.g., ERISA).
242 Donald J. Smythe, Shareholder Democracy and the Economic Purpose of the Corporation, 63 Wash. & Lee L. Rev. 1407, 1419 (2006) (“[I]t is doubtful whether the corporation was ever truly democratic in any important sense.”).
243 See supra Part I.C.
De-Democratization of Firms

A. Substitutionary Account

One account of firms and government looks to the former as a substitute for the latter (i.e., relying on corporations to do the work of government). In this context, the corporate democracy metaphor has been used to determine whether particular firms may be an appropriate substitute for governments.

The basic idea driving this substitutionary account of firms and governments is that when firms adopt governance structures that are familiar to government, and can achieve the same goals as government but with more efficiency, firms may be entrusted to do some of the work of government. One example of this account is the observation that franchise corporations that historically had a more public purpose (e.g., to provide local public

This account of firms has been used to support the performance of core public functions by corporations and other private entities. See, e.g., Gregory C. Shaffer, How Business Shapes Law: A Socio-Legal Framework, 42 CONN. L. REV. 147, 149–50 (2009) (describing businesses’ influence on foreign law and policy decisions of the United States); Louis Jaffe, Law Making by Private Groups, 51 HARV. L. REV. 201, 232–34 (1937) (describing cases where “an admittedly private body is entrusted with the power of administering law”); Freeman, supra note 17, at 581 (2000) (noting that in reality there are many examples suggesting that “federal government thus retains considerable flexibility to make substantial delegations of its responsibilities, and even of functions closely associated with core sovereign powers, to private parties”) (citing Flagg Bros., Inc. v. Brooks, 436 U.S. 149 (1978)); Grant McConnell, Public and Private Government, in PRIVATE GOVERNMENT 23 (Sanford A. Lakoff ed., 1973) (referring to the corporation as “probably the most important form of private government in America today.”); see also Mariana Pargender, Corporate Governance Obsession, 42 J. CORP. L. 359, 400 (2016) (“[A] distinctive feature of corporate governance, and a major source of its appeal, is its role as a substitute for free markets and government action.”); Harold I. Abramson, A Fifth Branch of Government: The Private Regulators and Their Constitutionality, 16 HASTINGS CONST. L.Q. 165, 168 (1989) (discussing the privatization of core governmental responsibilities such as the making of laws and adjudications of disputes); Nicolai Jagers, Will Transnational Private Regulation Close the Governance Gap?, in HUMAN RIGHTS OBLIGATIONS OF BUSINESS: BEYOND THE CORPORATE RESPONSIBILITY TO RESPECT? 295, 295 (Surya Deva & David Bilchitz eds., 2013) (explaining how the United Nations includes corporations in the discussion of regulation to enhance their effectiveness); John D. Donahue & Richard J. Zeckhauser, Collaborative Governance: Private Roles for Public Goals in Turbulent Times (2011). But see Julian Arato, Corporations as Lawmakers, 56 HARV. INT’L L.J. 229 (2015) (arguing that “international legal doctrine has gone too far in empowering multinationals against the state, while remaining too hesitant to demand any form of corporate accountability”); June Carbone & Nancy Levit, The Death of the Firm, 101 MINN. L. REV. 963, 964 (2017) (arguing that the “death of the firm,” i.e., the disappearance of the firm as an entity as a unit of legal analysis, has created challenges for “business entities serving as appropriate partners for the government in advancing public purposes”).

See, e.g., Frank Camm, Using Public-Private Partnerships Successfully in the Federal Setting, in HIGH-PERFORMANCE GOVERNMENT (Robert Klitgaard & Paul C. Light eds., 2005) (“Effective use of public-private partnerships (PPPs) . . . provides a proven way to (1) get agencies out of the day-to-day business of providing services so that they can stay mission-focused on what the American public wants from its government, and (2) simultaneously assure or even improve the cost and quality of the services the government provides to the American public.”).
goods, such as turnpikes and bridges) had more democratic governance provisions.\footnote{Smythe, supra note 115, at 1417 (“Given the public purpose of the franchise corporations it is hardly surprising that they typically featured more democratic governance provisions.”).}

Consistent with this basic idea, we have seen increased participation by businesses even on matters once considered to be the *grande politique*, such as foreign law and policy.\footnote{See generally Melissa J. Durkee, *The Business of Treaties*, 63 UCLA L. Rev. 264 (2016) (demonstrating increased business influence in international treaty-making).} John Stopford and Susan Strange have documented this shift of power from political institutions to the markets.\footnote{See John M. Stopford & Susan Strange, *Rival States, Rival Firms* (1991).} Tarun Khanna and Yishay Yafeh explain how business groups may also be suitable substitutes for economic institutions.\footnote{See Tarun Khanna & Yishay Yafeh, *Business Groups in Emerging Markets: Paragons or Parasites?*, 45 J. Econ. Lit. 331, 331 (2007).} And, as a result of this substitutability, business entities have grown to match government in terms of their economic and political might.\footnote{Mark Green & Robert Massie, Jr., *The Big Business Reader: Essays on Corporate America* 1 (1980) (“Many multinational corporation’s general revenues today draw the GNPs of dozens of foreign nations.”); Carl Kaysen, *The Corporation: How Much Power? What Scope? in The Corporation in Modern Society* 99 (Edward S. Mason ed., 1959) (“The market power which large absolute and relative size gives to the giant corporation is the basis not only of economic power but also of considerable political and social power of a broader sort. . . “); Earl Latham, *The Body Politic of the Corporation, in Private Government* 44 (Sanford A. Lakoff ed., 1973) (“One of America’s most important political problems is a long-needed and now-urgent redefinition of the relation between giant corporations and the commonwealth, for the growth of the corporation has produced a tension of power in which giant enterprises have at points come to rival the sovereignty of the state itself.”). The considerable political and social power enjoyed by public corporations have not gone unrecognized by securities regulators. See Donald C. Langevoort & Robert B. Thompson, “Publicness” in *Contemporary Securities Regulation after the JOBS Act*, 101 Geo. L. J. 337, 372–73 (2013).}

To be clear, the substitution of government functions by private firms does not automatically release governments from their obligation to perform their functions.\footnote{San Francisco Arts & Athletics, Inc. v. United States Olympic Comm., 107 S. Ct. 2971, 2993 (1987) (Brennan, J., dissenting) (“[W]hile the Government is free . . . to ‘privatize’ some functions it would otherwise perform . . . such privatization ought not automatically release those who perform government functions from constitutional obligation.”).} However, the substitutionary account may subject private entities to the same regulations that are applicable to public agencies.\footnote{Freeman, supra note 17, at 575–79 (describing the state action doctrine which treats private parties as “state actors” for purposes of imposing constitutional requirements).} Mariana Pargendler explains that the same formulas that have been used to control and legitimize power in the political sphere have been transposed upon the corporate form “in the hope of tackling numerous economic and social problems.”\footnote{Pargendler, supra note 244, at 366.} The de-democratization phenomenon suggests, however, that firms may not be well adapted to perform this substitutionary role. To the extent democratic governance is an important prerequisite for corporations to serve as
government substitutes, de-democratization requires a rethinking of the suitability of firms as a meaningful substitute for political and economic institutions.

Another version of this substitutionary account is one that paints firms and governments as in tension with one another. This account acknowledges that firms are not and cannot be democratically organized, and thus cannot be trusted to perform public functions. In particular, the shareholder primacy norm has at times been used to discredit firms’ ability to perform government functions. The shareholder primacy norm, and the governance structures that have been built around this norm, are seen as incompatible with the government’s broader pursuit of the public interest. Jody Freeman writes:

Private actors exacerbate all of the concerns that make the exercise of agency discretion so problematic. They are one step further removed from direct accountability to the electorate. . . . [P]rivate entities escape most of the procedural controls and budgetary constraints that apply to agencies. As nonstate actors, they remain relatively insulated from the legislative, executive, and judicial oversight to which agencies must submit. Driven by profit, ideology, or group allegiance, most private organizations may not develop the institutional norms of professionalism and public service that characterize many public bureaucracies.

De-democratization bolsters these accounts of firms as incompatible with public functions. If firms are deemed incapable of performing public functions because of their narrow orientation toward shareholders, the further narrowing of this orientation and the erosion of democratic principles in

---

255 See Christopher McMahon, Public Capitalism: The Political Authority of Corporate Executives 4 (2013) (“To be legitimate, the authority exercised by corporate executives must constitute a subordinate form of political—that is, public—authority.”).

256 McConnell, supra note 244, at 24 (“Concepts such as legitimacy, authority, power, and constitutionalism have now entered deeply into the discussion of the modern business corporation.”).

257 As argued by Justice Louis Brandeis: “We must make our choice. We may have democracy, or we may have wealth concentrated in the hands of a few, but we can’t have both.” See Raymond LonerGAN, MR. JUSTICE BRANDEIS, GREAT AMERICAN: PRESS OPINION AND PUBLIC APPRAISAL 42 (Erving Dillard ed., 1941). See also, e.g., Robert A. Dahl and Ian Shapiro, On Democracy 166 (2d ed. 1997) (“Democracy and market-capitalism are like two persons bound in a tempestuous marriage that is riven by conflict and yet endures because neither partner wishes to separate from the other.”).

258 See, e.g., Michael Taggart, The Province of Administrative Law Determined?, in The Province of Administrative Law 3, 3–7 (1997) (noting that self-regarding behavior is the starting point for private law whereas public-regarding behavior is the starting point for administrative law). Others are more optimistic, see Charles E. Merriam, The Study of Private Government, in Private Government 8, 15 (Sanford A. Lakoff ed., 1973) (“... in a democratic system, the rivalry sometimes arising between public and private organizations may most readily be reconciled. In a democracy all agencies and authorities are, or profess to be, servants of the common good.”).

259 Freeman, supra note 17, at 574.
corporate governance raise doubts as to whether firms can serve as government substitutes.

Consistent with this view, there is greater urgency to existing calls to constrain or remove private influence on public functions. One alternative would be to require democratic governance—along the dimensions of inclusiveness, equality, protectiveness, and mutuality, as proposed in this Article—as a prerequisite to private firms’ provision of public functions. Another alternative would be to more explicitly extend the usual mechanisms used to curb private influence (e.g., state action doctrine,260 the non-delegation doctrine,261 extending procedural controls,262 and infusing private law with public law norms) to firms that have a more “public” status in our society.263

B. Complementary Account

Another account views firms and governments as complements or in symbiosis (i.e., viewing the development of democratic corporate governance and democratic political governance as mutually advantageous).264 The mirror image of this account is that what is harmful to corporate democracy is also harmful to political democracies.265

The influential “law and finance” literature points to corporate governance reforms as a major determinant of economic development, which in turn provides the resources needed to sustain a thriving democracy.266 These accounts suggest that the development of democratic corporate governance and democratic political governance are mutually reinforcing. Democratic firms contribute to a more robust and thriving democracy, and democratic institutions create a more robust and thriving market. Specifically, the representative form of governance within firms has helped to sustain the separa-

---

261 See, e.g., Hampton & Co. v. United States, 276 U.S. 384, 411 (1928) (upholding delegation to President of responsibility to revise tariff duties).

262 Freeman, supra note 17, at 586–88 (“[P]roceduralizing private relationships could be an increasingly popular option in the era of widespread contracting out.”). Freeman acknowledges however that “[c]omplying with the bureaucratic requirements typically imposed on agencies—following detailed procedures, providing hearings, defending decisions to review boards and courts—could frustrate the benefits of private participation in governance by imposing significant burdens.” Id. at 587.

263 Id. at 574.

264 Rafael La Porta et al., Law and Finance, 106 J. POL. ECON. 1113 (1998). See also Adam Winkler, We the Corporations: How American Businesses Won Their Civil Rights 8 (2018) (“It was a corporation, after all, that planted the first seeds of democracy in the colonies, and the goal was to secure profit, not promote liberty.”).

265 Entrenchment is one example. See Daron Acemoglu & James A. Robinson, Why Nations Fail: The Origins of Power, Prosperity, and Poverty 84 (2012) for a discussion viewing entrenchment by elites as the greatest impediment to economic growth.

266 Rafael La Porta et al., supra note 264, at 1113.
tion of ownership and control, which in turn has facilitated the democratization of capital.

In this context, the corporate democracy metaphor has been used to determine the features of markets that make them favorable for democratic institutions. Robert Dahl has identified four such features. First, markets coordinate and control decisions of economic entities and produce goods and services with greater efficiency and orderliness. Second, economic growth tends to reduce the social and political conflicts that create challenges for democratic institutions. Third, economic growth provides surplus resources to support education. And fourth, economic growth creates owners who seek greater education, autonomy, freedom, property rights, rule of law, and participation in government.

Relatedly, Charles E. Merriam viewed private enterprise and public enterprise to be not in opposition but in apposition—stating that free industrial and free political societies are both “in the course of becoming the realization of the common good.” Jody Freeman has suggested that private actors’ participation in public functions may enhance government accountability. Grant McConnell echoes this view, singling out the “[m]assive endorsement of the private association as an essential of democracy” as one of the most striking features of American political thinking.

Approaching the same question but from the other direction, what are the features of democratic institutions that make them favorable for markets? Jonathan Macey explains that there is a “growing consensus around the globe that large, well-capitalized corporations can only exist in stable democracies with robust middle-class populations.”

---

267 MACEY, supra note 3, at 3 (“In the United States, more than in any other country, the modern publicly held corporation is characterized by the separation of share ownership and managerial control of the corporation itself.”).

268 Id. at 3–4 (“The ability to raise vast sums of money from widely disparate investors permits the democratization of capital. . . . Without an ownership structure characterized by the separation of share ownership and corporate management, it would not be possible to have both a robust middle class and a large number of powerful, multinational corporations.”).

269 See DAHL, supra note 19, at 167–68 (citing Aristotle who was the first to point out that the middle classes are “the natural allies of democratic ideas and institutions”).

270 Charles E. Merriam states:

The democratic forms of free association respect most fully the dignity of man, his possibilities for growth, the unfolding of the human personality in its widest forms. Under these conditions private enterprise and public enterprise, private rights and public rights are not in opposition but in apposition—free industrial and free political society—in the course of becoming the realization of the common good.”

Merriam, supra note 258, at 16.

271 Freeman, supra note 17, at 672 (showing that “private actors are integrated into decision-making structures” and “[a]lthough they might at times be dangerous, they are something more, and may, under the right conditions, produce accountability.”).

272 McConnell, supra note 244, at 17; see also id. at 35 (“The voluntary aspect of private associations has repeatedly been held to place them in a very special relationship to democracy, one often so special that it is described as a necessary condition of democracy.” (emphasis added)).

273 MACEY, supra note 3, at 5.
The de-democratization of firms is perhaps of greatest concern under this complementary account, as this trend suggests a failure of both democratic and corporate governance, which will trigger a vicious cycle. Under this account, the de-democratization of firms may be a consequence of de-democratization of our society, which will in turn result in a further de-democratization of firms, and so forth. Thus, to avoid this bleak future for both corporate and political democracy, a recalibration of democratic principles in both firms and governments would be urgently needed.

C. Model for “Good” Governance

The corporate democracy metaphor is at other times used as a way to provide one path forward, or a model, for corporate governance. This account recognizes that there are similarities between the practical challenges faced by firms and governments, and democratic governance is offered as one helpful reference point for corporate governance. James Madison recognized that representative democracies are inherently fragile, facing two foundational challenges. The first is capture by special interest (elected representatives being influenced by special interests rather than their constituents’ interests) and the second is perversion by “passions of the majority” (where the majority standard used in representative democracies oppresses minorities and violates their rights). Such subversions and perversions re-

---

275 This prescription is not without its critiques. In his review of the American Law Institute’s recommendations for a proposal for corporate governance reforms, economist Steve Pejovich criticizes the effort as “a substitution of legislative rules and institutions for the freedom of business firms to choose organizational forms in accordance with their own judgment of their own needs.” STEVE PEJOVICH, CORPORATE DEMOCRACY: AN ECONOMIST’S CRITIQUE OF PROPOSALS FOR CORPORATE GOVERNANCE AND STRUCTURE 6 (1984); Tom C.W. Lin, CEOs and Presidents, 47 U.C. Davis L. Rev. 1351, 1398–99 (2014) (cautioning that “[t]houghtless, wholesale attempts to ‘democratize’ corporations can cause serious harms to corporations, shareholders, and society”).

276 McConnell, supra note 244, at 41 (“The remarkable fact about private government, then, is . . . that it generally lacks the limitations that guard against tyranny and injustice to minorities and individuals. This lack, in turn, seems to be related to a deep and widespread illusion about the nature of politics in private associations.”).

278 James Madison suggests that this problem of the tyranny of the majority is more acute in small republics, where there is less competition among political groups. On the other hand, when there is a greater variety of political groups, they will act as checks on one another and there will be fewer opportunities for those with shared political views to communicate and act in concert with one another. Id.
De-Democratization of Firms

require proper checks and balances, such as a free, fair, and frequent election process and mechanisms to hold elected officials accountable.279

Corporate governance is also concerned with monitoring disloyal agents and combatting minority oppressions.280 In the corporate context, periodic meetings, elections, and fiduciary duties are used to hold directors accountable to the shareholders who sometimes have the power to elect, remove, or reprimand them.281 Recognizing that the challenges faced by a republic of many states and peoples are similar to the challenges faced by a corporation of many owners, the analogy of corporate governance to democratic governance has been one that is productive and thus often invoked to invite the two regimes to learn from one another.282

The basic question driving this account of firms and governments is: what can private firms learn from public administrations? In this context, the corporate democracy metaphor may be used to confer legitimacy on the corporate form but is not a necessary condition for a firm’s success. As such, requiring firms to take affirmative steps to conform to democratic ideals may be too narrow a response to the de-democratization phenomenon. Instead, a broader view would be to use this opportunity to make space for alternative constructs. Many are available, including, a donor-donee construct, meritocracy, “holacracy,”283 autocracy, monarchy, oligarchy,284 aristocracy, stewardship, or guardianship, among other alternatives.

279 DAHL, supra note 19, at 93–95 (1998) (“How can citizens participate effectively when the number of citizens become too numerous or too widely dispersed geographically . . . ? The only feasible solution, though it is highly imperfect, is for citizens to elect their top officials and hold them more or less accountable through elections by dismissing them . . . in subsequent elections.”). Craig Borowiak views accountability as a central principle of a democracy. He defines democratic accountability as “the principle that the governed should have opportunities to sanction and demand answers from the powers that govern them.” BOROWIAK, supra note 39.

280 MACEY, supra note 3, at 1 (“The purpose of corporate governance is to persuade, induce, compel, and otherwise motivate corporate managers to keep the promises they make to investors.”).

281 See Grant M. Hayden & Matthew T. Bodie, One Share, One Vote and the False Promise of Shareholder Homogeneity, 30 CARDOZO L. REV. 445 (2008).

283 HOLACRACYONE, LLC, https://www.holacracy.org (last visited Feb. 25, 2018), (referring to a method of governance in which authority and decision-making are distributed throughout self-organizing teams).

284 See ADOLF A. BERLE & GARDINER MEANS, THE MODERN CORPORATION AND PRIVATE PROPERTY (1932) (cautioning that elected officials would become a self-reproducing oligarchy who would not be accountable to the owners they represent). Berle continued this critique in his later writings, writing for example in 1957: “[W]henever there is a question of power there is a question of legitimacy. As things stand now, these instrumentalities of tremendous power have the slenderest claim of legitimacy.” ADOLF A. BERLE, ECONOMIC POWER AND THE FREE SOCIETY 16 (1957). See also McConnell, supra note 244, at 27 (“The Michelsian theory of oligarchy in organization seems all too well substantiated by the corporation . . . the reality is so plain that to dispute the thesis of oligarchy is scarcely worth undertaking.”).
Exploring the last of these examples as an alternative reference point for firms—could corporations be better characterized as guardianships rather than democracies? Guardians have long been the major rival to democracies. Guardians refer to experts who are seen to have superior knowledge about the general good and the best means to achieve it. The key difference between guardianships and democracies is that in the former, the experts have the final say and control over how to govern. Robert Dahl articulates a “host of formidable practical problems” of guardianships, starting with the practical questions of how successors will be chosen and how incompetent guardians will be discharged, all of which suggest that a new ideal for corporate governance will come with its own set of misgivings.

Another possible construct is a pluralist theory of corporations, which has also been proposed as an ideal for civic democracies. Pluralist governance envisions a small group of people that have direct influence over a particular issue, with the important caveat that those with influence over one issue are not the same as those with influence over others. In the corporate context, there is evidence of a trend toward pluralism, as shown by the requirement that certain decisions be made by a committee and/or independent directors and particular foreign examples where workers and creditors are included in corporate governance and decision-making.

Which reference point is chosen depends on the particularities of each firm. As a general matter, however, the de-democratization of firms reported in this Article suggests that now may be a good time to reconsider the perils of imposing democratic ideals upon firms. Democratic governance relies heavily on the principal-agent construct, which does not carry over neatly into corporate governance. Relatedly, a strict adherence to corporate democracy may bind to owners’ existing preferences without considering the capacity to imagine and adopt new preferences, which is an outcome that goes against the normative goals of the corporate democracy metaphor.

285 DAHL, supra note 19, at 69.
286 Delaware case law already embraces the guardianship construct, providing that directors can encumber the shareholder franchise if they are able to show that they know better than shareholders what is good for them. Id. at 70.
287 Id. at 71 (“The fundamental issue in the debate over guardianship versus democracy is not whether as individuals we must sometimes put our trust in experts. The issue is who or what group should have the final say in decisions made by the government of a state.”).
288 Id. at 74.
289 Id.
291 See id. at 221 (describing the Japanese zaibatsu model and the creditors’ influence on corporate governance).
292 See Deborah A. DeMott, Shareholders as Principals, in KEY DEVELOPMENTS IN CORPORATE LAW AND TRUSTS LAW: ESSAYS IN HONOUR OF PROFESSOR HAROLD FORD 105, 106, (Ian Ramsay ed., 2002) (“[T]he metaphorical association with common-law agency is generally not helpful, given the structure of contemporary corporation statutes, and may be affirmatively misleading.”).
CONCLUSION: THE FUTURE OF CORPORATE DEMOCRACY

Every time the corporate democracy metaphor is used to shape the way business organizations are governed and regulated, the concept is simultaneously reinvented. While corporate governance and democratic governance can be woven together to offer a productive analogy, the analogy is not perfect, and some of its flaws and inconsistent uses have had serious consequences. This Article offers a conceptual and definitional framework that can be used to correct some of the misperceptions that have resulted from the inconsistent use of the corporate democracy metaphor.

While the Article does not take a position on whether democratic governance is desirable or undesirable for firms, should firms wish to be more democratically organized, the development of new technologies, such as blockchains, make this a more likely and less costly reality. Blockchains were first developed as a method to validate virtual currency ownership with speed, accuracy, and transparency. Today, however, blockchains have been reimagined for use in other contexts. Specifically, David Yermack suggests that blockchain offers four immediate improvements for corporate governance. First, posting business transactions, books, and records on a public blockchain can help reduce information asymmetry. Second, using blockchain to keep records of who owns shares can help increase transparency, reduce rent-seeking by insiders, and eliminate empty voting by allowing all shareholders to view ownership changes (in their own firms as well as in other firms) instantly. Third, using blockchain to record votes means that votes can be quickly, precisely, and securely recorded, and both managers and shareholders will have equal access to voting outcomes. And fourth, using blockchain as a voting platform can reduce the cost and increase the reliability of shareholder voting.

Blockchain and its promise to motivate greater shareholder participation in corporate governance has caught the attention of market participants and regulators. (reporting that the Australian Securities Exchange intends to redesign clearing and settlement systems using blockchain, the Estonian stock exchange conducts shareholder...
actors will avail themselves of these technological developments to align the reality of corporate governance with the rhetoric of corporate democracy.

<table>
<thead>
<tr>
<th>FIRM</th>
<th>Summary of Voting Standards Provided in the Governing Documents</th>
</tr>
</thead>
<tbody>
<tr>
<td>16 firms’ (ACAS; AMG; BX; CG; CODI; FH; FNFV; FSAM; GAIN; GARS; GSBD; MCC; MVC; NMFC; OZM; PJT) governing documents are silent on voting standards (all are Delaware entities).</td>
<td></td>
</tr>
</tbody>
</table>
| AINV | • Approval of charter amendments and extraordinary transactions by the stockholders entitled to cast at least a majority of the votes entitled to be cast  
• Certain charter amendments and any proposal for conversion, whether by merger or otherwise, from a closed-end company to an open-end company or any proposal for liquidation or dissolution requires the approval of the stockholders entitled to cast at least 80 percent of the votes entitled to be cast  
• However, if such amendment or proposal is approved by at least two-thirds of continuing directors (in addition to approval by board of directors), such amendment or proposal may be approved by a majority of the votes entitled to be cast |
| APO | • So long as the Apollo Group beneficially owns at least 10% of the aggregate number of votes that may be cast by holders of outstanding voting shares (the ‘Apollo control condition’), the manager will conduct, direct and manage all activities of APO, LLC  
• So long as the Apollo control condition is satisfied, the manager will manage all operations and activities and will have discretion over significant corporate actions, such as the issuance of securities, payment of distributions, sales of assets, making certain amendments to our operating agreement and other matters, and the board of directors will have no authority other than that which our manager chooses to delegate to it |
| ARCC | • Certain charter amendments and any proposal for our conversion, whether by merger or otherwise, from a closed-end company to an open-end company or any proposal for our liquidation or dissolution requires the approval of the stockholders entitled to cast at least 80 percent of the votes entitled to be cast on such matter.  
• However, if such amendment or proposal is approved by at least two-thirds of continuing directors (in addition to approval by board of directors), such amendment or proposal may be approved by a majority of the votes entitled to be cast |
| ARES | • Majority of Outstanding Voting Units required to approve a merger, consolidation, or conversion of the partnership into another limited liability entity. |

\textsuperscript{380} See id.
### BKCC
- The conversion from a business development company to an open-end investment company, liquidation and dissolution, and the merger or consolidation with any entity in a transaction as a result of which the governing documents of the surviving entity do not contain substantially the same anti-takeover provisions or the amendment of any of the provisions discussed herein shall require the approval of:
  - (i) the holders of at least 80% of the then outstanding shares, voting together as a single class, or
  - (ii) at least (A) a majority of the "continuing directors" and (B) the holders of at least 75% of the then outstanding shares entitled to vote generally in the election of directors, voting together as a single class.

### CPTA
- Approval of charter amendments and extraordinary transactions by the stockholders entitled to cast at least a majority of the votes entitled to be cast.
- Certain charter amendments, any proposal for our conversion, whether by charter amendment, merger or otherwise, from a closed-end company to an open-end company and any proposal for our liquidation or dissolution requires the approval of the stockholders entitled to cast at least 80% of the votes entitled to be cast.
- However, if such amendment or proposal is approved by a majority of continuing directors (in addition to approval by our Board of Directors), such amendment or proposal may be approved by a majority of the votes entitled to be cast.
- Any amendment or proposal that would have the effect of changing the nature of business so as to cause CPTA to cease to be, or to withdraw its election as, a BDC would be required to be approved by a majority of outstanding voting securities.

### CSWC
- The affirmative vote of the holders (other than Related Persons with whom the Business Combination is proposed) of not less than two-thirds of the outstanding shares of voting stock not owned, directly or indirectly, by the Related Person or Related Persons with whom the Business Combination is proposed shall be required for the approval or authorization of any Business Combination.
- provided, however, that the requirement referred to above shall not be applicable if: the Business Combination is solely between the corporation and another corporation, fifty percent (50%) or more of the Voting Stock of which is owned, directly or indirectly, by the corporation and none of the Voting Stock of which is owned, directly or indirectly, by a Related Person with whom the Business Combination is proposed; or
- All of the following conditions have been met:
  - the consideration to be received per share by holders of common stock of the corporation in the Business Combination.
is not less than the higher of (i) the highest price per share paid by the Related Person with whom the Business Combination is proposed in acquiring any of its holdings of the corporation’s common stock or (ii) the highest per share market price of the common stock of the corporation during the three-month period immediately preceding the date of the proxy statement;

- the consideration to be received by such holders is either cash or, if the Related Person with whom the Business Combination is proposed shall have acquired the majority of its holdings of the corporation’s common stock for a form of consideration other than cash, in the same form of consideration as such Related Person acquired such majority;

- the Related Person shall not have received the benefit, directly or indirectly (except proportionately as a shareholder), of any loans, advances, guarantees, pledges or other financial assistance or any tax credits or other tax advantages provided by the corporation; and

- a proxy statement shall be mailed to all shareholders of record at least forty (40) days prior to the date of a meeting for the purpose of soliciting shareholder approval and shall contain at the front thereof, in a prominent place, any recommendations as to the advisability (or inadvisability) of the Business Combination and, if deemed advisable by a majority of the Continuing Directors, an opinion of a reputable investment banking firm as to the fairness (or unfairness) of the terms of such Business Combination from the point of view of the remaining shareholders of the corporation.

### FDUS
- Approval of charter amendments and extraordinary transactions by the stockholders entitled to cast at least a majority of the votes entitled to be cast on the matter.

- Certain charter amendments, any proposal for conversion, whether by charter amendment, merger or otherwise, from a closed-end company to an open-end company and any proposal for liquidation or dissolution requires the approval of the stockholders entitled to cast at least 80.0% of the votes entitled to be cast.

- However, if such amendment or proposal is approved by a majority of continuing directors (in addition to approval by our board of directors), such amendment or proposal may be approved by a majority of the votes entitled to be cast.

### FIG
- Principals will have approval rights with respect to certain extraordinary transactions so long as they and their permitted transferees continue to hold more than 40% of the total voting power of our outstanding shares.”

### FSIC
- Provided that directors then in office have approved and declared the action advisable and submitted such action to the stockholders, action that requires stockholder approval, including dissolution, a
merger or a sale of all or substantially all assets or a similar transaction outside the ordinary course of business must be approved by the affirmative vote of stockholders entitled to cast at least a majority of all the votes entitled to be cast.

- The affirmative vote of the holders of shares entitled to cast at least 80% of all the votes entitled to be cast on the matter, with each class that is entitled to vote on the matter voting as a separate class, shall be required to effect any amendment to the charter to make the common stock a “redeemable security” or convert FSC, whether by merger or otherwise, from a “closed-end company” to an “open-end company” (as such terms are defined in the 1940 Act), to cause its liquidation or dissolution or any amendment to its charter to effect any such liquidation or dissolution, or to amend certain charter provisions.

- provided that, if the Continuing Directors, by a vote of at least two-thirds of such Continuing Directors, in addition to approval by the board of directors, approve such amendment, the affirmative vote of only the holders of stock entitled to cast a majority of all the votes entitled to be cast shall be required.

**GBDC**
- Board of directors adopted a resolution exempting from DGCL § 203 any business combination between GBDC and any other person, subject to prior approval of such business combination by the board of directors, including approval by a majority of directors who are not “interested persons”.
- Otherwise DGCL § 203 and applicable requirements of the 1940 Act apply.

**GSVC**
- Approval of charter amendments and extraordinary transactions by the stockholders entitled to cast at least a majority of the votes entitled to be cast

- Certain charter amendments, any proposal for conversion, whether by charter amendment, merger or otherwise, from a closed-end company to an open-end company and any proposal for liquidation or dissolution requires the approval of the stockholders entitled to cast at least 80% of the votes entitled to be cast on such matter.

- However, if such amendment or proposal is approved by a majority of continuing directors (in addition to approval by our board of directors), such amendment or proposal may be approved by a majority of the votes entitled to be cast.

**HTGC**
- Provided that at least 75% of directors then in office have approved and declared the action advisable and submitted such action to the stockholders, any dissolution, any amendment to the charter that requires stockholder approval, a merger, a sale of all or substantially all assets or a similar transaction outside the ordinary course of business must be approved by the affirmative vote of stockholders entitled to cast at least a majority of the votes entitled to be cast.
If an extraordinary matter submitted to stockholders by the board of directors is approved by less than 75% of our directors, such matter will require approval by the affirmative vote of stockholders entitled to cast at least two-thirds of the votes entitled to be cast.

KCAP

- The affirmative vote of the holders of at least 75% of the shares of the corporation’s capital stock then outstanding and entitled to vote in the election of directors, voting together as a single class shall be required to (1) amend or repeal any provision of Articles V, VI, VII, VIII or IX of the Certificate of Incorporation, (2) effect the liquidation or dissolution of the corporation and any amendment to the Certificate of Incorporation to effect any such liquidation or dissolution, or (3) a conversion of the corporation from a “closed-end company” to an “open-end company”.

- provided, however, that, if the Continuing Directors (as defined herein), by a vote of at least 75% of such Continuing Directors, in addition to approval of the Board of Directors, approve such proposal or amendment, the affirmative vote of the holders of the majority of the votes entitled to be cast shall be sufficient.

KKR

- The board shall not authorize, approve or ratify any of the following actions or any plan with respect thereto without the prior approval of a majority of Class A Members:
  - entry into a debt financing arrangement in an amount in excess of 10% of the then existing long-term indebtedness of the Issuer;
  - the issuance of any securities that would (i) represent at least 5% of any class of equity securities or (ii) have designations, preferences, rights, priorities or powers that are more favorable than those of the common units;
  - the adoption of a shareholder rights plan;
  - the amendment of the Issuer Limited Partnership Agreement or the Group Partnership Agreements;
  - the exchange or disposition of all or substantially all of the assets, taken as a whole, of the Issuer or any Group Partnership;
  - the merger, sale or other combination of the Issuer or any Group Partnership with or into any other person;
  - the transfer, mortgage, pledge, hypothecation or grant of a security interest in all or substantially all of the assets of the Group Partnerships;
  - the appointment or removal of a Chief Executive Officer or a Co-Chief Executive Officer of the Company or the Issuer;
  - the termination of the employment of any Officer of the Issuer or a Subsidiary of the Issuer or the termination of the association of a partner with any Subsidiary of the Issuer, in each case, without cause; and
  - liquidation or dissolution; and
2019] De-Democratization of Firms

| MAIN | Approval of amendments to articles of incorporation and extraordinary transactions by the stockholders entitled to cast at least a majority of the votes entitled to be cast
|      | Certain amendments and any proposal for conversion, whether by merger or otherwise, from a closed-end company to an open-end company or any proposal for liquidation or dissolution requires the approval of the stockholders entitled to cast at least 75.0% of the votes entitled to be cast
|      | However, if such amendment or proposal is approved by at least 75.0% of continuing directors (in addition to approval by the board of directors), such amendment or proposal may be approved by the stockholders entitled to cast a majority of the votes entitled to be cast

| OAK  | The board of directors may, without member approval, (i) convert into a new limited liability entity or (ii) merge into, or convey all of the company’s assets to, another limited liability entity, which entity shall be newly formed and shall have no assets, liabilities or operations at the time of such conversion, merger or conveyance; provided, that (A) the company has received an Opinion of Counsel that the merger or conveyance, as the case may be, will not result in the loss of the limited liability of any member, (B) the sole purpose of such conversion, merger or conveyance is to effect a mere change in the legal form of the company into another limited liability entity and (C) the governing instruments of the new entity provide the members and the board of directors with substantially the same rights and obligations as are herein contained.
|      | so long as its sponsors (or their successors or affiliated entities) collectively hold, directly or indirectly, at least 20% of the aggregate outstanding Oaktree Operating Group units (referred to as the “Oaktree control condition”) the manager entity, which is 100% owned and controlled by its sponsors will be entitled to designate all the members of Oaktree’s board of directors

| PNNT | Approval of charter amendments and extraordinary transactions by the stockholders entitled to cast at least a majority of the votes entitled to be cast
|      | Certain charter amendments and any proposal for conversion, whether by merger or otherwise, from a closed-end company to an open-end company or any proposal for liquidation or dissolution requires the approval of the stockholders entitled to cast at least 80 percent of the votes entitled to be cast
